INTEGRATIVE ILLUSTRATED NOTES
RAPID REVISION NOTES

*PLEASE VERIFY THE CONTENT WITH THE BOOK
YOU ARE REFERRING !!!

Ayurvedic Clinical Examination: Prashna & Panchendriya Pareeksha Flowchart

1. Prashna Pareeksha (Interrogation)

Method:

Asking about history, pain, habits, digestion, lifestyle.

Clinical Interpretation:

Time of aggravation (Dosha link), Pain nature (Vata/Pitta/Kapha), Lifestyle link (Nidana).

@Yogesh_Gabhane

2. Panchendriya Pareeksha (Five Senses Examination)

A. Chakshu Indriyataha Pareeksha (Visual)

Method:

Inspection of Varna, Aakriti, Pramana, Vikara.

Clinical Interpretation:

Yellow (Jaundice), Pallor (Anemia), Dryness (Vata), Redness (Pitta).

B. Srotrendriyataha Pareeksha (Auditory)

Method:

Auscultation of Svara (voice), Vishesha Shabda (body sounds).

Clinical Interpretation:

Hoarseness (Laryngitis), Wheezing (Asthma), Crepitus (Joints), Gurgling (Abdomen).

C. Sparshanendriyataha Pareeksha (Tactile)

Method:

Palpation of Sparsha (Temp/Texture), Kathinya/Mriduta, Nadi.

Clinical Interpretation:

Hot (Fever), Cold/Clammy (Shock), Rough (Vata), Hardness (Tumor).

D. Ghranendriyataha Pareeksha (Olfactory)

Method:

Smell of body, excretions, ulcers.

Clinical Interpretation:

Fruity (Diabetes), Fishy (Ama), Putrid (Necrosis), Metallic (Bleeding).

E. Rasanendriyataha Pareeksha (Gustatory - Indirect)

Method (Indirect):

Prashna (taste in mouth), Observation (ants to urine).

Clinical Interpretation:

Sweet mouth (Kapha/Sugar), Bitter mouth (Pitta/Fever), Ants to urine (Diabetes).

ASHTAVIDHA PAREEKSHA

(The Eight-fold Ayurvedic Examination)

1. NADI (Pulse)

Vata: Sarpa gati (Snake-like movement)

- Index finger.

Pitta: Manduka gati (Frog-like movement)

- Middle finger.

Kapha: Hamsa gati (Swan-like movement)

- Ring finger.

@Yogesh_Gabhane

2. MUTRA (Urine)

Oil Drop Test: Spreading/sinking pattern indicates prognosis & Dosha. Color, clarity, quantity, frequency examined.

3. MALA (Stool)

3. MALA (Stool)

Sama vs. Nirama: Sinking = Ama (toxins); Floating = Good digestion.

Consistency: Hard/dry (Vata), Yellowish/liquid (Pitta), Pale/heavy (Kapha).

4. JIHVA (Tongue)

Vata: Cold, rough, cracked.

Pitta: Red, hot, yellow/green coating.

Kapha: Pale, white, thick/slimy coating.

5. SHABDA (Voice/Speech)

5. SHABDA (Voice/Speech)

Vata: Hoarse, dry, rapid.

Pitta: Sharp, clear, commanding.

Kapha: Deep, slow, resonant.

6. SPARSHA (Touch/Skin)

Vata: Cold, rough, dry.

Pitta: Hot or warm.

Kapha: Cool, damp, soft.

7. DRIK (Eyes/Vision)

Vata: Dry, sunken, nervous.

Pitta: Red, yellow, light-sensitive.

Kapha: White, large, watery.

8. AKRITI (General Appearance/Physique)

8. AKRITI (General Appearance/Physique)

Vata: Lean, thin frame, prominent veins.

Pitta: Medium build, muscular.

Kapha: Stout, heavy build, tendency to gain weight.

HOLISTIC DIAGNOSIS: Assesses **Vikruti** (imbalance) vs. **Prakruti** (constitution) to treat the root cause.

Dashavidha Pareeksha (Ten-fold Examination)

1. Rogi Bala (Patient's Strength)

**A. Prakriti
(Physical Constitution)**
Inherent nature from conception.
Predicts susceptibility & prognosis.

**B. Sara
(Tissue Excellence)**
Quality of 7 Dhatus. Indicates
biological strength & immunity.

**C. Samhanana
(Compactness/Build)**
Physical build & symmetry.
Good compactness implies strength.

**D. Pramana
(Anthropometry)**
Body proportion measurement.
Proper proportions linked to longevity.

**E. Satmya
(Suitability/Adaptability)**
Habituation to substances/climates.
Guides dietary & lifestyle advice.

**F. Sattva
(Mental Strength)**
Psyche/mind power to endure pain.
Crucial for treatment tolerance.

**G. Ahara Shakti
(Digestive Power)**
Capacity to ingest & digest food.
Determines medicine dosage.

**H. Vyayama Shakti
(Physical Capacity)**
Ability to perform physical work.
Assesses workload tolerance.

I. Vaya (Age)
Chronological age.
Influences dosage & prognosis.

2. Roga Bala (Disease Severity)

J. Vikriti (Pathological State)

Current morbidity/disease state.
Assesses Dosha, Dhatu, Mala imbalance.

Overall Goal: Tailored Treatment Plan.
Prevents 'one size fits all'. Ensures safety
& efficacy based on individual capacity.

@Yogesh_Gabhane

AYURVEDIC DIFFERENTIAL DIAGNOSIS: SAPEKSHA vs. VYAVACCHEDAKA NIDANA

SAPEKSHA NIDANA

(Comparative Diagnosis: Listing Possibilities)

Amavata
(Rheumatoid
Arthritis)

Sandhivata
(Osteoarthritis)

Vatarakta
(Gout)

PROCESS:

Identify a group of diseases sharing **SIMILAR SYMPTOMS** (*Samanya Lakshana*) or causes (*Hetu*). Forms a broad list.

ACTION: INCLUSION

Refining the Diagnosis

VYAVACCHEDAKA NIDANA

(Diagnosis by Exclusion: Confirming Certainty)

Amavata

Sandhivata

Vatarakta

(Gout)

PROCESS:

Rule out diseases using **UNIQUE DISTINGUISHING SIGNS** (*Pratyatma Lakshana*) to eliminate incorrect options.

ACTION: EXCLUSION

Amavata?

Unique Sign:
Scorpion-bite like pain.
Result: **LIKELY**

Sandhivata?

Unique Sign:
Crepitus (cracking sound).
Result: **RULED OUT**

Vatarakta?

Unique Sign:
Big toe burning start.
Result: **RULED OUT**

**FINAL CONFIRMED DIAGNOSIS:
AMAVATA**

Precision in Treatment (*Chikitsa*)
begins here.

AYURVEDIC CONCEPT OF IMMUNITY & VITALITY

VYADHIKSHAMATVA (Immunity/Disease Resistance)

Vyadhibalavirodhatvam (Fighting Power)

Resists manifested disease strength.

Vyadhiutpadpratibandhakatvam (Preventive Power)

Prevents disease origin.

OJAS

(Essence of Vitality & Dhatus)

Quintessence of all 7 tissues, sustains life.

TYPES OF OJAS

PARA OJAS (Supreme)

Qty: 8 Bindu.
Location: Heart (Hridaya).
Function: Sustains Prana.
Loss = Death.

APARA OJAS (Functional)

Qty: 1/2 Anjali.
Location: Circulates in Body.
Function: General Strength & Immunity.
Loss = Weakness.

OJAS DUSHTI LAKSHANA (Disorders of Ojas)

@Yogesh_Gabhane

A. VISRAMSA (Displacement)

Symptoms: Loose joints, body weakness, Dosha displacement, functional inability.

B. VYAPAT (Vitiation)

Symptoms: Stiffness, heaviness, Vata swelling, discoloration, exhaustion, drowsiness.

C. KSHAYA (Depletion)

Symptoms: Fainting, muscle wasting, delusion, incoherent speech, leads to death.

RELATION TO BALA (Immunity/Strength)

Ojas is the substance, Bala is the function.
Healthy Ojas = Strong Bala.
Synonymous with natural Kapha.

TYPES OF BALA

SAHAJA BALA (Innate)

Constitutional, present from birth.

KALAJA BALA (Time-Influenced)

Influenced by season & age.

YUKTIKRITA BALA (Acquired)

Acquired through diet, exercise, Rasayana.

CONCLUSION:

Optimal Ojas is essential for strong Bala (Immunity) and overall health.

Vyadhikshamatva in Detail

VYADHIKSHAMATVA (Ayurvedic Immunity)

Capacity to resist disease & prevent illness progression

Etymology:
Vyadhi (Disease) +
Kshamatva (Resistance)

Chakrapani's 2-Fold Action

**Vyadhi-bala-
virodhitvam**
(Curative: Restrains
existing disease)

**Vyadhi-utpada-
pratibandhakatvam**
(Preventive: Prevents
new disease)

THE FOUNDATION: OJAS (Vital Essence)

Essence of all 7 Dhatus (tissues).
Abundant Ojas = Strong Immunity.
Physical substrate.

THREE TYPES OF BALA (Strength/Immunity)

A. Sahaja Bala (Innate)

From birth. Depends on parents'
Shukra & Artava (genetic).
High in Sama Prakriti.

B. Kalaja Bala (Temporal)

Influenced by Time, Season
(e.g., highest in winter), and
Age (highest in youth).

C. Yuktikrita Bala (Acquired)

Achieved through effort.
Controllable. Via Diet, Regimen
(Chesta), & Rasayana.

FACTORS INFLUENCING VYADHIKSHAMATVA

Agni
(Digestive Fire)
Balanced Agni =
Healthy tissues. Weak
Agni = Ama (toxins)
-> Low immunity.

Prakriti
(Constitution)
Kapha-dominant
often has higher
stability & immunity.

Diet (Ahara)
Satmya (wholesome)
boosts; Viruddha
Ahara destroys.

Mind (Satva)
Strong mind
(Pravara Satva)
endures stress better.

Body Condition
Very obese or
emaciated have lower
immunity than
compact (Samhanna).

@Yogesh_Gabhane

HOW TO ENHANCE VYADHIKSHAMATVA (Enhancement Strategies)

Rasayana Therapy
Nourishes Ojas with
rejuvenating herbs.

Panchakarma
Periodic detoxification
to clear Ama (toxins)
and channels.

Swarnaprashana
Pediatric gold ash
therapy to boost
immunity in children.

Lifestyle (Vihara)
Adherence to Dinacharya
(daily) & Ritucharya
(seasonal) routines.

AVARANA: OBSTRUCTION OF VATA DOSHA

(Ayurvedic Concept)

1. DEFINITION

'Avarana' means covering or obstruction. It is a condition where the free movement (Gati) of Vata Dosha is impeded by stronger agents, leading to functional disorders.

2. KEY COMPONENTS (MECHANISM)

AVARAKA (The Obstructor)

Stronger Agent (e.g., Pitta, Kapha, Dhatus, Malas). Aggravated & Blocks the path.

BLOCKS

AVRITA (The Obstructed)

Weaker Agent (Vata Dosha). Movement is blocked; becomes functionally weak.

3. TYPES OF AVARANA (3 Main Categories)

@Yogesh_Gabhane

A. DOSHAVRITA VATA
Obstruction by other Doshas.
E.g., Pittavrita (Burning),
Kaphavrita (Heaviness, Cold).

B. DHATU/MALA AVRITA VATA
Obstruction by Tissues/Waste.
E.g., Medavrita (Fat, Obesity),
Raktavrita (Blood, Discoloration).

C. ANYONYA AVARANA
Mutual obstruction of Vata Subtypes.
E.g., Pranavrita Vyana (Neurological issues).

4. GENERAL PATHOGENESIS (SAMPRAPTI)

STAGE 1: AGGRAVATION OF AVARAKA

Due to etiology, the obstructor (e.g., Kapha/Fat) increases and blocks the path (Srotorodha).

STAGE 2: OBSTRUCTION (GATI NIRODHA)

Mobile Vata tries to move but encounters the Avaraka and cannot pass.

STAGE 3: PROVOCATION OF VATA

Trapped Vata accumulates and gets 'provoked', moving in reverse/wrong directions (Vimarga Gamana).

STAGE 4: CLINICAL MANIFESTATION

Mixed symptoms appear: Increased Avaraka symptoms (e.g., heaviness) + Decreased Vata function (e.g., pain, loss of movement).

THE CONCEPT & CLASSIFICATION OF VYADHI (DISEASE) IN AYURVEDA

DEFINITION OF VYADHI:

That which connects the self with misery (Duhkha).

Sanskrit: 'Tad-duhkha-samyogā vyādhaya uchante' (तदुदुःखसंयोगा व्याधय उच्यन्ते).

Synonyms: Roga, Amaya, Gada, Jvara, Vikara.

PRIMARY CLASSIFICATION: TRIVIDHA DUHKHA (Three Main Sources of Misery)

GROUP I: ADHYATMIKA (Internal/Self-Originated)

1. ADIBALA PRAVRITTA (Hereditary/Genetic)

Origin: Defects in Shukra (Sperm) or Shonita (Ovum).

Sloka: "Tatra ādibalapravṛttā ye śukraśonitadosānvayāḥ..." (तत्र आदिबलप्रवृत्ता ये शुक्रशोणितदोषान्वयाः...)

Subtypes: Matrīja (Maternal: Skin, soft tissue), Pitṛīja (Paternal: Hair, bone).

Examples: Kushta (Leprosy), Arsha (Piles), Prameha (Diabetes).

2. JANMABALA PRAVRITTA (Congenital)

Origin: Improper conduct/diet of mother during pregnancy.

Sloka: "Janmabalapravṛttā ye māturaṇācārāt..." (जन्मबलप्रवृत्ता ये मातुरणचारतः...)

Subtypes: Rasakṛita (Vitiated nutrient fluid), Dauhrida-apacharakṛita (Suppressed cravings).

Examples: Pangu (Lame), Badhira (Deaf), Muka (Dumb), Dwarfism.

3. DOSHABALA PRAVRITTA (Acquired/Metabolic)

Origin: Vitiation of Doshas due to Mithya Ahār Vihar (Bad diet/lifestyle) after birth.

Sloka: "Doṣabalapravṛttā ye āturapacārādūpannāḥ..." (दोषबलप्रवृत्ता ये आतुरपचारदुपन्नाः...)

Subtypes: Amashaya-samuttha (Stomach), Pakvashaya-samuttha (Colon).

Examples: Jwara (Fever), Atisara (Diarrhea), Kasa (Cough).

GROUP II: ADHIBHAUTIKA (External/Living Sources)

4. SANGHATABALA PRAVRITTA (Traumatic)

Origin: External trauma, conflict, or injury caused by outside forces.

Sloka: "Saṅghātabalapravṛttā ye āgantavo durbalasya..." (सङ्घातबलप्रवृत्ता ये आगन्तवो दुर्बलस्य...)

Subtypes: Shastra-kṛita (Weapons), Vyala-kṛita (Wild animals).

Examples: Fractures, Cuts, Bruises, Animal bites.

GROUP III: ADHIDAIVIKA (Supernatural/Environmental)

5. KALABALA PRAVRITTA (Seasonal)

Origin: Meteorological changes and seasonal variations.

Sloka: "Kālabalapravṛttā ye śiṭoṣṇavātavarṣā..." (कालबलप्रवृत्ता ये शीतोष्णवातवर्षाः...)

Subtypes: Vyapanna-ritu (Abnormal seasons), Avyapanna-ritu (Normal seasons, failure to adapt).

Examples: Sunstroke, Frostbite, Seasonal Flu.

6. DAIVABALA PRAVRITTA (Providential)

Origin: Divine wrath, curses, invisible forces, contagions.

Sloka: "Daivabalapravṛttā ye devadrohād..." (दैवबलप्रवृत्ता ये देवद्रोहादः...)

Subtypes: Vidyut-ashani (Natural disasters), Pisacha-adi (Microbes/Spirits).

Examples: Epidemics, Idiopathic diseases.

7. SWABHAVABALA PRAVRITTA (Natural Functional)

Origin: Inevitable natural physiological processes.

Sloka: "Svabhāvabalapravṛttā ye kṣutpipāsā..." (स्वभावबलप्रवृत्ता ये क्षुत्पिपासाः...)

Subtypes: Kalaja (Timely aging), Akalaja (Premature aging).

Examples: Kṣut (Hunger), Pipasa (Thirst), Jara (Old Age), Mrityu (Death), Nidra (Sleep).

END OF CLASSIFICATION

@Yogesh_Gabhane

SAMPRAPTI

(The Process)

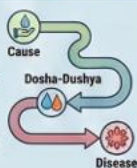

vs.

SHAT KRIYA KALA

(The Timeline of Pathogenesis)

SAMPRAPTI (Definition)

The complete journey of disease formation from **Nidana** (Cause) to **Vyadhi** (Disease). It explains **HOW** Doshas interact with tissues.

Sanskrit Sloka:

यथा दुष्टेन दोषेण यथा चाविसर्पता ।
निवृत्तिरामपस्यासौ सम्प्रापिर्जातिरागतिः ॥
(अष्टांग हृदय, निदान स्थान १.८)

SHAT KRIYA KALA (Concept)

The Six 'Times for Action' (Stages) within the process, introduced by Sushruta for timely intervention.

It indicates **WHEN** to treat.

@Yogesh_Gabhane

1. SANCHAYA (Accumulation)

What Happens: Doshas increase quantitatively in their natural seats due to Nidana.

Key Feature: Stagnant accumulation.

Clinical Status: Mild, vague symptoms (e.g., fullness, lethargy).
Easiest to treat (reversible).

2. PRAKOPA (Aggravation/Provocation)

What Happens: Accumulated Doshas become 'liquefied' and agitated, ready to move.

Key Feature: Qualitative vitiation.

Clinical Status: Discomfort increases (e.g., acid reflux, pain).
Easy treatment (mild purification).

3. PRASARA (Spread/Dissemination)

What Happens: Doshas overflow and spread through Srotas (channels) looking for a lodgement site.

Key Feature: Vimarga Gamana (Wrong movement).

Clinical Status: Systemic or shifting symptoms.
Not yet localized.

4. STHANA SAMSRAYA (Localization)

What Happens: Doshas lodge at a site of Kha Vaigunya (tissue weakness).

Key Feature: DOSHA-DUSHYA SAMMURCHANA begins.

Clinical Status: PURVARUPA (Prodromal signs) appear. Critical borderline stage.

5. VYAKTI (Manifestation)

What Happens: Full disease manifests with characteristic signs.

Key Feature: Completed interaction.

Clinical Status: RUPA (Clear clinical signs/symptoms). Diagnosis easy, treatment harder.

6. BHEDA (Differentiation/Complication)

What Happens: Disease becomes chronic, severe, or leads to complications (Upadravas).

Key Feature: Differentiation into subtypes or tissue damage.

Clinical Status: Chronic/Incurable.
Treatment difficult or palliative.

DISEASE ESTABLISHED / CHRONICITY

TREATMENT WINDOW: Easiest (Top) → Difficult → Impossible

SAMPRAPTI: DEFINITION & TYPES

(Pathogenesis in Ayurveda)

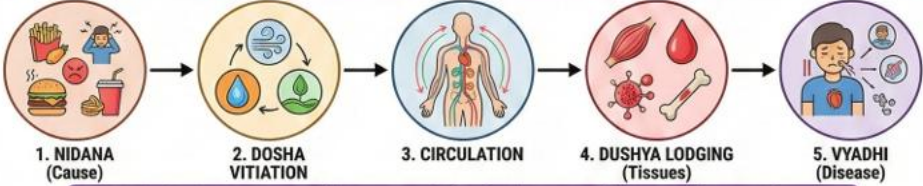

DEFINITION OF SAMPRAPTI

The comprehensive process of disease manifestation. It explains how causative factors (Nidana) vitiate Doshas, which circulate, lodge in tissues (Dushyas), and produce disease (Vyadhi).

Etymology

Sam (Complete) + Prapti (Arrival/Attainment) = "Complete Arrival of Disease"

SANSKRIT SLOKA: व्याधिजनक दोषव्यापारविशेषः एव सम्प्राप्तिः।
(Vyadhi janaka dosha vyapara vishesha hu Samprapti)

TYPES OF SAMPRAPTI (Samprapti Bhedas) - According to Acharya Charaka

1. SANKHYA SAMPRAPTI (Numerical Classification)

Focus: Number of varieties

Concept: Categorizing disease by the number of types listed in texts.

Example:

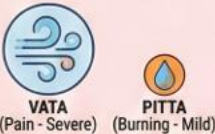

e.g., 8 types of Fever, 5 types of Gulma, 20 types of Prameha.

3. PRADHANYA SAMPRAPTI (Predominance Analysis)

Focus: Mixed Doshas (Samsarga/Sannipata)

Concept: Identifies Primary (Pradhana) vs. Secondary (Apradhana) Dosha.

Example:

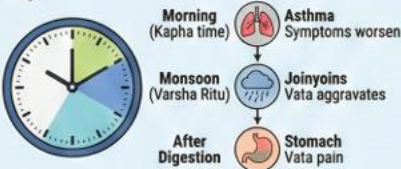

Vata-Pradhana condition. Treatment focuses on Vata first. Uses Tara (comparative) & Tama (superlative) grades.

5. KALA SAMPRAPTI (Temporal/Time Analysis)

Focus: Relationship with Time

Concept: Variation based on Day, Night, Season, Digestion time.

Example:

2. VIKALPA SAMPRAPTI (Qualitative/Fractional Analysis)

Focus: Amsha-Amsha Kalpana (Fractional vitiation)

Concept: Determines WHICH SPECIFIC QUALITY (Guna) is aggravated.

Example:

Crucial for treatment (e.g., Ruksha Vata needs oil, Sheeta Vata needs heat).

4. BALA SAMPRAPTI (Strength/Severity Analysis)

Focus: Strength for Prognosis

Concept: Interaction of Nidana, Prakriti, Kala determines severity.

Example:

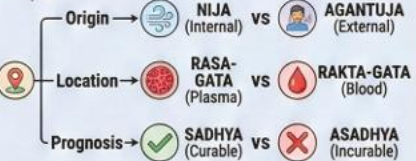

Contradictory factors lead to weaker disease.

6. VIDHI SAMPRAPTI (Typological Classification)

Focus: Fundamental Categories

Concept: Grouping diseases by origin, location, prognosis, etc.

Example:

Also includes Swatantra (Independent) vs. Paratantra (Secondary).

SUMMARY TABLE

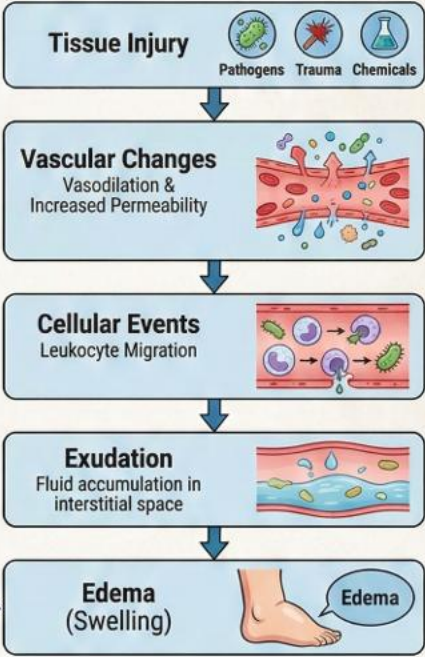

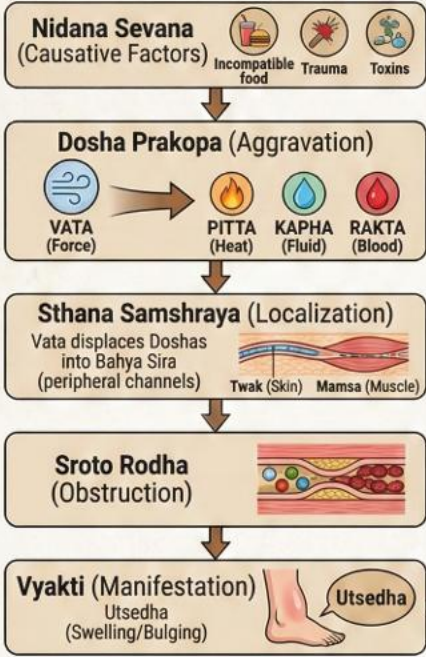

Type	Focus	Key Question
Sankhya	Number	"How many types exist?"
Vikalpa	Quality (Fraction)	"Which attribute is high?"
Pradhanya	Predominance	"Which Dosha is leader?"
Bala	Strength	"How severe is it?"
Kala	Time	"When does it worsen?"
Vidhi	Variety	"What is its fundamental nature?"

INFLAMMATION: AYURVEDA (SHOTHA) VS. MODERN MEDICINE

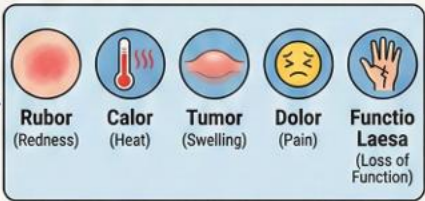

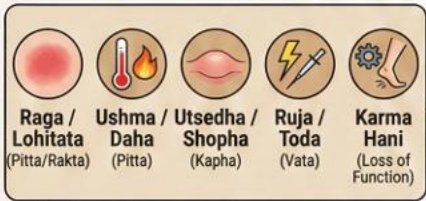

AYURVEDA (SHOTHA)

MODERN MEDICINE (INFLAMMATION)

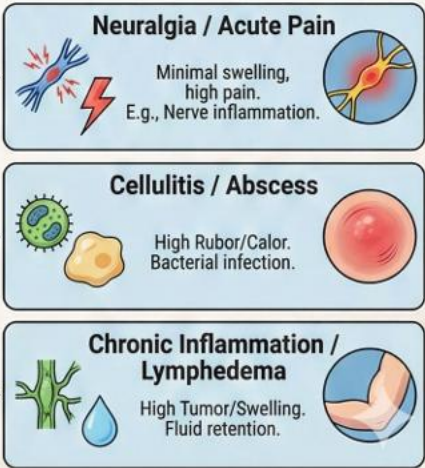

MECHANISM (SAMPRAPTI VS. PATHOGENESIS)

SIGNS & SYMPTOMS (LAKSHANA VS. CARDINAL SIGNS) @Yogesh_Gabhane

TYPES OF INFLAMMATION (COMPARISON)

PATHOLOGICAL CONDITIONS: DEFINITION, CLASSIFICATION, MECHANISM

1. INFLAMMATION

DEFINITION:
Protective vascular/
cellular response
to injury.

CLASSIFICATION:

Acute (Short, fluid/neutrophils) **Chronic** (Long, lymphocytes/fibrosis) **Granulomatous** (Granulomas)
Vascular Events (Vasodilation, Permeability) → **Cellular Events** (Leukocyte migration) → **Phagocytosis** (Engulfment)

2. SEPTICAEMIA (SEPSIS)

DEFINITION:
Bacteria in blood
("poisoning") leading to
organ dysfunction.

CLASSIFICATION:

Septicaemia (Bacteria multiply) **Sepsis** (Infection + SIRS) **Septic Shock** (Sepsis + hypotension)
Bacteria/Toxins → **Cytokine Storm** → **Vasodilation/DIC** → **Organ Failure**

3. OEDEMA

DEFINITION:
Abnormal excess fluid
in tissues/cavities.

CLASSIFICATION:

Fluid (Transudate - low protein; Exudate - high protein) **Location** (Localized; Generalized/Anasarca)
High Hydrostatic Pressure OR **Low Oncotic Pressure** OR **Lymphatic Obstruction** OR **Retention** → **Fluid Leakage**

4. SHOCK

DEFINITION:
Systemic hypoperfusion
leading to cellular
hypoxia.

CLASSIFICATION:

Hypovolemic (Fluid loss) **Cardiogenic** (Pump failure) **Septic** (Infection) **Anaphylactic** (Allergy) **Neurogenic** (CNS injury)
Reduced Cardiac Output/Volume → **Hypoperfusion** → **Cellular Hypoxia & Anaerobic Metabolism** → **Cell Death**

5. HAEMORRHAGE

DEFINITION:
Escape of blood from a
ruptured vessel.

CLASSIFICATION:

Anatomical (Arterial, Venous, Capillary) **Timing** (Primary, Reactionary, Secondary) **Location** (External, Internal)
Vessel Disruption (Trauma/Pathology) → **Pressure forces blood out** → **Extravasation**

6. THROMBOSIS

DEFINITION:
Formation of a solid
mass (thrombus) inside
flowing vessel.

CLASSIFICATION:

Arterial (White, turbulence) **Venous** (Red, stasis) **Mural** (Heart wall)
MECHANISM (Virchow's Triad):
Endothelial Injury + **Altered Blood Flow** (Stasis/Turbulence) + **Hypercoagulability** → **Thrombus Formation**

7. EMBOLISM

DEFINITION:
Occlusion by a
detached mass
traveling in blood.

CLASSIFICATION:

Matter (Thromboembolism, Fat, Air, Amniotic) **Route** (Pulmonary, Systemic)
MECHANISM:
Mass Detaches → **Travels in Circulation** → **Lodges in smaller vessel** → **Mechanical Blockage**

8. ISCHEMIA

DEFINITION:
Deficiency of blood
supply due to
constriction/obstruction

CLASSIFICATION:

Complete/Partial **Acute/Chronic**
MECHANISM:
Supply < Demand → **Hypoxia, Waste Accumulation** → **Nutrient Lack** → **Tissue Stress**

9. INFARCTION

DEFINITION:
Area of ischemic
necrosis (tissue death)
due to occlusion.

CLASSIFICATION:

Color (White/Pale - solid organs; Red/Hemorrhagic - loose tissues) **Infection** (Septic; Bland)
MECHANISM:
Vessel Occlusion → **Persistent Ischemia** → **Irreversible Injury & Necrosis** → **Inflammation & Scar**

@Yogesh_Gabhane

DHATUPAKA: PATHOLOGICAL TISSUE DESTRUCTION IN AYURVEDA

1. Vitiation & Stasis

Morbid Doshas travel via channels (Srotas) and lodge deep within a specific Dhatu (Tissue).

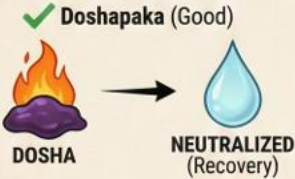

2. Mechanism: Agni Vitiation (Pitta Driven)

Local Dhatvagni flares up, fueled by aggravated Pitta, attacking tissue substrate instead of nourishing.

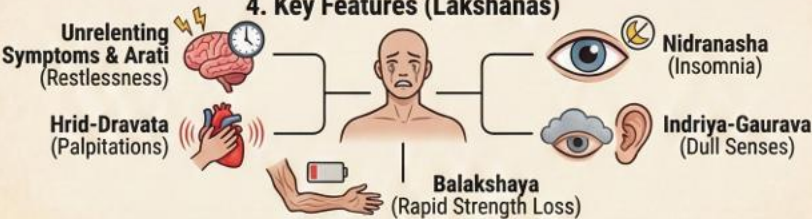

@Yogesh_Gabhane

3. Core Process: Tissue 'Cooking' (Not Dosha Digestion)

Unlike beneficial Doshapaka, this is the suppuration & destruction of vital Dhatu itself.

4. Key Features (Lakshanas)

Persistent severe symptoms, anxiety, sensory dullness, and profound energy depletion.

5. Examples of Dhatupaka

A. Deep Jwara (Fever):
Fever moves deep, no sweat, delirium, rapid wasting.

B. Wasting Disease (e.g., TB):
"Muscle wasting" (Mamsa-kshaya), body consumes own tissue.

C. Septic Wound (Visarpa):
Rapid liquefaction of solid tissue by infection heat.

Manifests in severe fevers, chronic wasting, and necrotic conditions.

Final Outcome: Path to Severe Complication or Death

Prognosis is grave; leads to critical state, unlike Doshapaka which leads to cure.

@Yogesh_Gabhane

ARISHTA VIGYAN:

Study of Fatal Signs in Ayurveda (Prognosis)

@Yogesh_Gabhane

ARISHTA (Fatal Signs & Symptoms)

DEFINITION OF ARISHTA

Core Concept

Signs indicating imminent & inevitable death; Doshas exceed treatable scope.

Analogy (Charaka Samhita)

Like flowers foretelling fruit, smoke indicating fire, or rain clouds predicting rain, Arishta indicates approaching death.

Manifestations

Physical Appearance
(e.g., sudden luster loss)

Sensory Perception
(e.g., hearing non-existent sounds)

Behavior & Intellect
(e.g., sudden nature change, memory loss)

Dreams
(e.g., specific ominous dreams)

IMPORTANCE IN PROGNOSIS

1. Determining Curability (Sadhyasadhyata)

Crucial for distinguishing Curable (Sadhya) vs. Incurable (Asadhyata). Presence of Arishta generally means Asadhyata.

2. Guiding Treatment Decisions

Ancient advice: Avoid treating if Arishta is present. Risk of losing reputation, wealth, and social standing.

3. Predicting Lifespan (Ayu)

Allows prediction of "when" death will occur, not just "if". Signs linked to specific timelines (e.g., 1 year, 1 month, instantly).

4. Diagnostic Precision

Forces holistic observation beyond disease symptoms: Voice, smell, shadow (Chaya), environment, vital force (Prana).

5. Ethical & Practical Management

Aids palliative care and honest family counseling, preparing for the inevitable instead of giving false hope.

NOTE ON HOMONYM

In Ayurveda, 'Arishta' can also refer to fermented medicinal preparations (e.g., Dasamoolarishta). This flowchart focuses on the fatal signs definition.

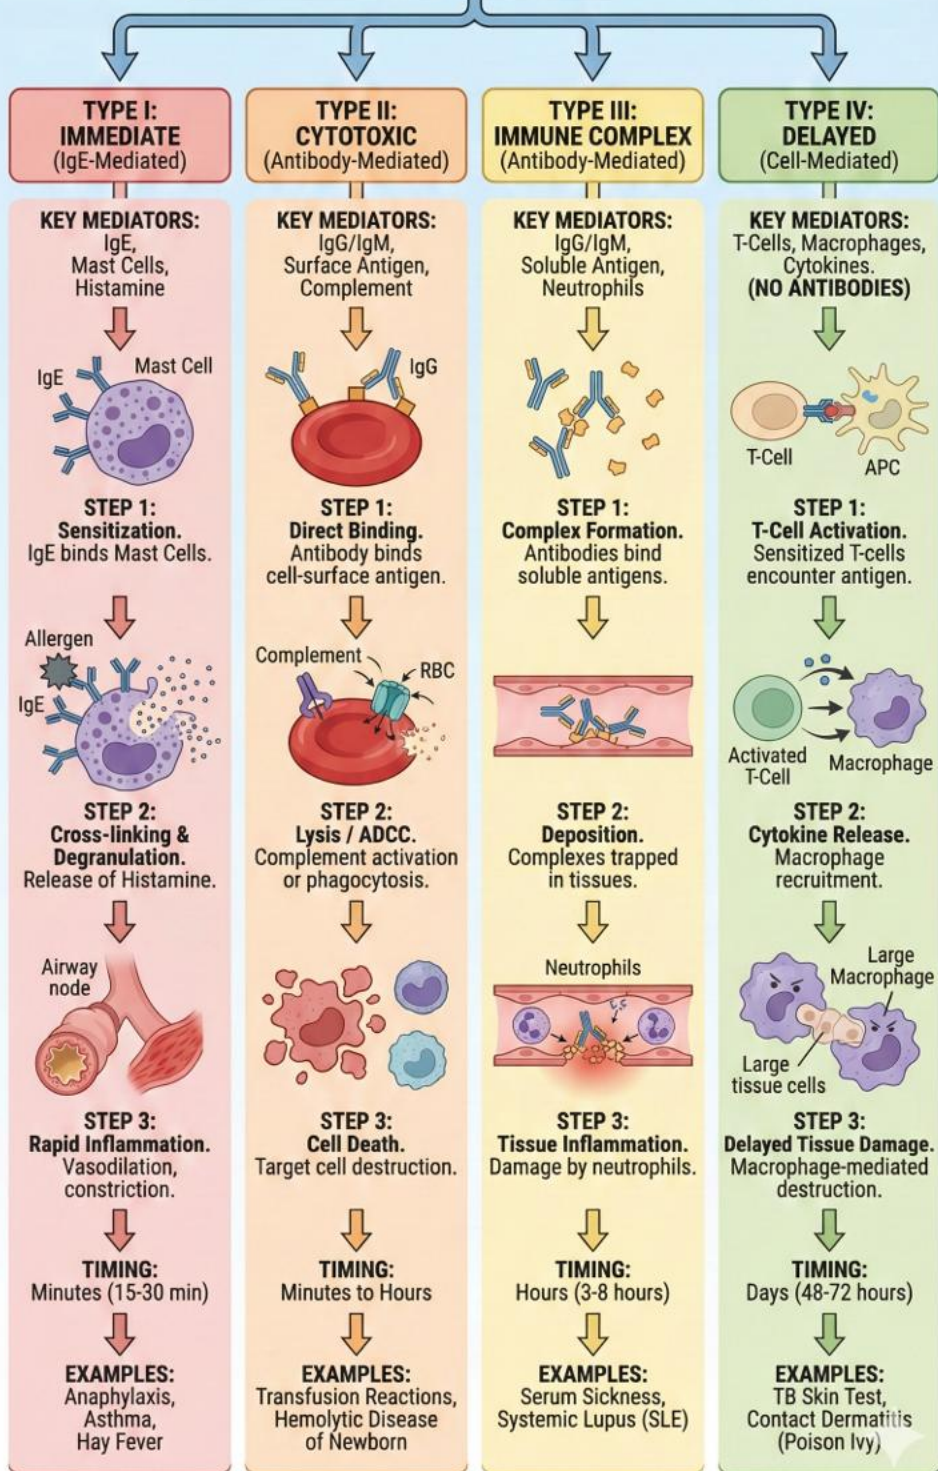

HYPERSENSITIVITY

DEFINITION:

An exaggerated or inappropriate immune response to an antigen (foreign or self) that results in inflammation and tissue damage to the host.
(Classified into 4 types).

Type I

IgE

airborne
allergens

histamine
leukotrienes
prostaglandins

anaphylaxis
atopic reactions

Type II

cytolytic/
cytotoxic

IgM & IgG

complement
system

ABO incompatibility
reactions

Type III

immune
complex

IgM & IgG

lupus
rheumatoid
arthritis
glomerulonephritis

Type IV

delayed
hypersensitivity

no antibodies
T cells
macrophages
cytokines

TB test
dermatitis
transplant
rejection

@Yogesh_Gabhane

SAMANYA SROTO DUSHTI LAKSHANA

General Signs of Channel Vitiatioin in Ayurveda

SANSKRIT SHLOKA (Charaka Samhita, Vimana Sthana 5/24):

अतिप्रवृत्तिः सङ्गो वा सिराणां ग्रन्थयोऽपि वा ।
विमार्गगमनं चापि स्रोतसां दुष्टलक्षणम् ॥

@Yogesh_Gabhane

4 MAIN CHARACTERISTICS (Signs of Dysfunction)

1. ATIPRAVRUTTI (Excessive Flow)

1. ATIPRAVRUTTI (Excessive Flow)

Meaning: Increased flow or production beyond normal limits.

Example: Diarrhea (Atisara), Heavy menstrual bleeding.

2. SANGA (Obstruction/Stagnation)

2. SANGA (Obstruction/Stagnation)

Meaning: Obstruction, retention, or holding back of materials.

Example: Constipation, Urinary retention.

3. SIRA GRANTHI (Nodules/Growths)

3. SIRA GRANTHI (Nodules/Growths)

Meaning: Structural changes like cysts, tumors, or dilation.

Example: Varicose veins, Tumors, Thrombosis.

4. VIMARGA GAMANA (Wrong Direction Flow)

4. VIMARGA GAMANA (Wrong Direction Flow)

Meaning: Diversion of flow through improper pathways or reverse movement.

Example: Vomiting (Chardi), Jaundice (Kamala).

Conclusion: These signs confirm Srotas involvement, guiding Ayurvedic diagnosis and treatment (Shodhana or Shamana).

AYURVEDIC CONCEPT OF SROTAS: CHANNELS OF THE BODY

सु (Sru) -> To Flow/Permeate

@Yogesh_Gabhane

1. DEFINITION (Srotas - Lakshana)

Sanskrit root "Sru" (सु): To flow, ooze, filter, permeate.

Classical Definition: "स्रवणात् स्रोतांसि ।" (Sraṇāt srotāṃsi)

- Structures from which flow occurs.

Importance: "स्रोतोमयं हि शरीरं ।" — The entire body is comprised of channels, essential for transport of nutrients (Poshaka Dhatus).

Sira (सिरा)
- Veins (carry blood)

Nadi (नाडी)
- Tubular structures/Nerves

Marga (मार्ग)
- Pathways/Roads

2. SYNONYMS (Paryaya)

Ashaya (आशय)
- Receptacles/Organs

Dhamani (धमनी)
- Arteries (pulsating)

Pantha (पन्थानः)
- Passages

Shariracchidra (शरीरच्छिद्राणि)
- Body orifices

3. TYPES OF SROTAS (Sroto-Bhed)

@Yogesh_Gabhane

A. BAHYA SROTAS (External Openings)

Visible openings
Males: 9, Females: 12
List:
2 Ears
2 Eyes
2 Nostrils
1 Mouth
1 Anus
1 Urethra
(+ 2 Breasts, 1 Vagina in Females)

B. ABHYANTARA SROTAS (Internal Systems)

Comparison:	Charaka (13) vs. Sushruta (11 Pairs)
Input Systems	Pranavaha, Udakavaha, Annavaha
Dhatu Systems	Rasavaha, Raktavaha, Mamsavaha, Medovaha, Shukravaha Sushruta excludes Asthivaha, Majjavaha
Waste Systems	Mutravaha, Purishavaha Sushruta excludes Swedavaha
Female Specific	Sushruta adds Artavavaha

4. SAMANYA HETU OF SROTO DUSHTI (General Causes of Vitiation)

"आहारश्च विहारश्च यः स्यादोषगुणैः समः ।
धातुभिर्विगुणश्चापि स्रोतसां स प्रदूषकः ॥"
(Charaka Samhita, Vimana Sthana 5/23)

Diet (Ahara) & Lifestyle (Vihara)
with qualities:

1. DOSHA GUNAIH SAMAH:
Similar to qualities of Doshas (Vata, Pitta, Kapha)
→ CAUSES DOSHAS TO INCREASE.

2. DHATUBHIR VIGUNASHCHAPI:
Opposite to qualities of Dhatus (Tissues)
→ CAUSES DAMAGE TO TISSUES.

EXAMPLE:

Alcohol (Madya) - Hot & Sharp.
Increases Pitta (Similar to Dosha),
Destroys Ojas/Shukra (Opposite to Dhatus).
Result: Sroto Dushti.

PRANAVAHA SROTODUSHTI:

HETU, LAKSHANA, & CLINICAL INTERPRETATION

(Based on Charaka Samhita Vimana Sthana Ch. 5)

HETU

(Etiological Factors)

SLOKA REF: Charaka Samhitā Vimāna Sthāna 5/10

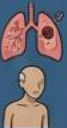

क्षयात्सन्धारणाद्रौक्ष्याद्व्यायामात्क्षुधितस्य च ।
प्राणवहानी दुष्यन्ति स्रोतांस्यन्यानि दारुणैः ॥

Kshayāt sandhāraṇāt raukshyāt vyāyāmāt kṣudhitasya ca ।
Prāṇavahāni duṣyanti srotāṁsyanāni dāruṇaiḥ ॥

@Yogesh Gabhane

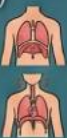

KSHAYA (Depletion)

Literal: Wasting of tissues.
Clinical: Immunodeficiency,
Chronic Disease (e.g.,
Tuberculosis, Malnutrition).

SANDHARANA (Suppression)

Literal: Suppression of
natural urges.
Clinical: Reflex Suppression,
Increased Intrathoracic
Pressure, ANS Dysregulation.

RAUKSHYA (Excessive Dryness)

Literal: Excessive dryness.
Clinical: Dehydration, Dry
Environment, Impaired
Mucociliary Clearance.

VYAYAMA KSHUDHITASYA (Exercise while Hungry)

Literal: Physical exercise
when hungry.
Clinical: Metabolic Stress,
Catabolism, Cardiovascular
Strain.

ANYANI DARUNAIH (Severe/Cruel Causes)

Literal: Other severe causes.
Clinical: Trauma, Poisoning,
Inhalation of Toxins.

LAKSHANA

(Signs of Vitiatio)

SLOKA REF: Charaka Samhitā Vimāna Sthāna 5/7

अतिस्फुटमतिबद्धं कुपितं वाऽल्पमल्पशः ।
अभीक्ष्णं सशब्दशूलं उच्छ्वसन्तं दृष्ट्वा
प्राणवहान्यस्य स्रोतांसि प्रदुहनीति विद्यात् ॥

Atisṛṣṭam atibaddham kupitam vā'lpam alpaśah ।
Abhikṣṇam saśabda śūlam uchchvasantam drṣṭvā
prāṇavahānyasya srotāṁsi praduhānīti vidyāt ॥

ATISRISHTAM (Excessive)

Ayurvedic View:
Excessive/prolonged expiration.
Clinical: Hyperventilation,
Kussmaul breathing (acidosis).

ATIBADDHAM (Restricted)

Ayurvedic View: Difficulty,
feeling of blockage.
Clinical: Obstructive Lung
Disease (COPD, Asthma),
Bradypnea.

KUPITAM (Agitated)

Ayurvedic View:
Angry/violent breathing.
Clinical: Dyspnea (labored),
Use of accessory muscles.

ALPAM ALPASHAH (Shallow & Frequent)

Ayurvedic View: Short,
shallow, frequent breaths.
Clinical: Tachypnea, Restrictive
Lung Disease, Anxiety.

SASHABDAM (With Sound)

Ayurvedic View: Breathing
with noise.
Clinical: Wheezing (Asthma),
Stridor, Rales/Crackles
(Pneumonia).

SASHULAM (With Pain)

Ayurvedic View: Painful
respiration.
Clinical: Pleurisy, Pneumothorax,
Chest Trauma.

GENERAL CLINICAL INSIGHT & MULA (ROOTS)

MULA: HRIDAYA (Heart) & MAHASROTAS (GI Tract)

Cardiopulmonary connection &
Gut-Lung axis.

SAMPRAPTI GHATAKA (Pathology Factors)

Dosha: Prana/Udana Vayu, Kapha
Dushya: Rasa Dhatu.
Adhithana: Lungs, Heart, GI Tract.

SHUKRAVAHA SROTODUSHTI: ETIOLOGY, SIGNS & CLINICAL INTERPRETATION

(Based on Charaka Samhita)

MULA (ROOTS) @Yogesh_Gabhane

VRISHANA (Testes)
Sperm production base

SHEPHA (Penis/Phallus)
Ejaculation organ

HETU (ETIOLOGICAL FACTORS) -

- Sloka: अकालयोनिसमनानिगृहादतिमैथुनात् ।
शुक्रवाहीनि दुष्यन्ति शस्त्रक्षाराग्निविभ्रमात् ॥

AKALA / AYONI GAMANA

Improper time/method sex
Interpretation: Circadian
disruption, infection risk.

NIGRAHAT

Suppression of urge
Interpretation: Retrograde
ejaculation, prostatitis.

ATI MAITHUNA

Excessive intercourse
Interpretation: Dhatukshaya,
fatigue, Oligospermia.

SHASTRA

Surgical trauma
Interpretation: Vasectomy
complications, urethral
stricture.

KSHARA

Alkali/Chemical cautery
Interpretation: Chemical
tissue damage.

AGNI

Thermal burns/Radiation
Interpretation: Radiation
therapy effects.

LAKSHANA (SIGNS & SYMPTOMS) - Sloka:

क्लीबतामहर्षणं दोगी शुक्रं चिरात् प्रसिच्यते । रक्तं शुक्रं तथा दुष्टं क्षीणं शुक्रं सृजत्यपि ॥

KLAIBYA

Impotence
Interpretation: Erectile
Dysfunction (ED).

AHARSHANAM

Lack of excitement
Interpretation:
Loss of Libido.

CHIRAT PRASICHYATE

Delayed ejaculation
Interpretation:
Anejaculation, obstruction.

RAKTASHUKRATA

Bloody semen
Interpretation:
Hematospermia, infection.

SHUKRA DOSHA

Vitiated quality
Interpretation: Dys-spermia
(pH, viscosity issues).

ALPA / KSHINA SHUKRA

Scanty semen
Interpretation:
Oligospermia, Hypospermia.

VIRUPA PRAJA

Deformed progeny
Interpretation: Teratospermia,
congenital anomalies.

NA PRAJAYATE

Infertility
Interpretation: Male Factor
Infertility (Azoospermia).

CLINICAL INTERPRETATION (SROTODUSHTI TYPES)

ATIPRAVRUTTI

Excessive flow
Interpretation: Premature
Ejaculation, Spermatorrhea.

SANGA

Obstruction
Interpretation: Obstructive
Azoospermia, BPH, Stricture.

SIRA GRANTHI

Dilatation/Growths
Interpretation: Varicocele,
Cysts, Tumors.

VIMARGA GAMANA

Reverse/Wrong flow
Interpretation: Retrograde
Ejaculation.

RASAVAHA SROTODUSHTI

(According to Sushruta Samhita)

1. MULA (Roots of the Channel)

Sanskrit sloka:

तत्र रसवहानां स्रोतसां हृदयं मूलं
रसवहाश्च धमन्यः ।

The roots... are the **Hridaya** (Heart)
and the **Rasavaha Dhamanis** (Arteries).

@Yogesh_Gabhane

2. HETU (Inferred Etiology / Causes)

Ahara (incompatible/heavy food),
Vihara (exertion after eating), **Manas**
(stress affecting Agni).

Sloka **Rasa Kshaya**:

हृत्पीडा कम्पशून्यतातृष्णाः ॥

Pain in the heart, tremors, sense of
emptiness, excessive thirst.

3. SROTODUSHTI / VIDHA LAKSHANA (Signs of Injury)

Sloka **Rasa Kshaya**:

तत्र विद्धस्य शोषः प्राणवहशोषणं
मरणं वा ॥

Injury results in **Shosha** (Wasting),
Pranavaha Shoshanam (Drying of
vital force), or **Maranam** (Death).

4. CLINICAL INTERPRETATION

A. Anatomical Correlation

Focuses on the **Cardiovascular System**. **Heart** (pump)
failure or **Arterial** (pipe) **blockage** prevents nutrient delivery.

B. Interpretation of Injury Signs

'**Shosha**' correlates to Malabsorption/Cachexia.

'**Pranavaha Shoshanam**' to Shock/Dehydration.

'**Maranam**' to Severe Hemorrhage/Cardiac Arrest.

C. Secondary Diseases (**Rasa Pradoshaja Vikara**)

Includes **Arochaka** (Anorexia), **Pandu** (Anemia),
Angamarda (Body ache), **Jwara** (Fever).

Sushruta's Artavavaha Srotas (Menstrual Channels) Flowchart

1 THE ROOTS (MULA)

Sanskrit Sloka: आर्तववहे द्वे, तयोर्मूलं गर्भाशय आर्तववाहिन्यश्च धमन्यः ।
Ārtavavahe dve, tayormūlaṃ garbhāśaya ārtavavāhinyāśca dhamanyaḥ |

MEDOVAHA SROTODUSHTI (Vitiation of Fat Channels): Hetu, Lakshana, & Clinical Interpretation

Based on Charaka Samhita

I. HETU (Etiological Factors)

अवायामाद्वास्वप्नाग्नेद्यानां च अतिभक्षणात् ।
मेदोवहानि दुष्यन्ति वारुण्याश्च अतिसेवनात् ॥
(Charaka Samhita, Vimana Sthana 5/16)

1. Avyāyama
(Lack of physical exercise)

Clinical Interpretation:
Sedentary Lifestyle: Low
caloric expenditure leads to
fat accumulation.

2. Divāsrapna
(Sleeping during the day)

Clinical Interpretation:
Circadian Disruption: Slows BMR,
increases Kapha & Meda,
contributes to insulin resistance.

3. Medyānam Atibhakṣaṇāt
(Excessive fatty/oily foods)

Clinical Interpretation:
High-Fat Diet: Direct
cause of Dyslipidemia &
Hypercholesterolemia.

4. Vārunyā Atisevaṇāt
(Excessive intake of alcohol/Varuni)

Clinical Interpretation:
Alcohol Consumption: Inhibits fat
burning, causes Hepatic Steatosis,
provides empty calories.

MEDOVAHA SROTAS DUSHTI
(Vitiation of Fat Channels)

@Yogesh_Gabhane

II. LAKSHANA (Signs & Symptoms)

निन्दितानि प्रमेहाणां पूर्वरूपाणि यानि च ।
मेदोवहाप्रदोषाज्ञास्तानि विद्यात् प्रमेहिणः ॥
(Charaka Samhita, Vimana Sthana 5/17)

1. Sveda āgamah
(Profuse sweating) &
Anga gandham (Foul body odor)

Clinical Interpretation:
Hyperhidrosis & Bromhidrosis:
Metabolic waste affecting
sweat (Mala of Meda).

6. Kara pada dāha/suptata
(Burning/Numbness in extremities)

Clinical Interpretation:
Neuropathy/Poor Circulation: Early
neuropathy or atherosclerosis.

2. Shithila angata
(Flabbiness of body parts)

Clinical Interpretation:
Loss of Muscle Tone:
Accumulation of
excess adipose tissue.

3. Shayya asana
svapna sukhe rathi
(Desire for sedentary comfort)

Clinical Interpretation:
Lethargy & Sluggish
Metabolism: Correlates
with Hypothyroidism or
Metabolic Syndrome.

4. Hridaya upadeha
(Heaviness in chest)

Clinical Interpretation:
Feeling of Heaviness:
Associated with increased
visceral fat and sluggish
circulation.

5. Madhurya asya
(Sweet taste in mouth)

Clinical Interpretation:
Altered Taste Perception:
Early sign of metabolic
derangement.

7. Polydipsia & Polyphagia
(Implied symptoms)

Clinical Interpretation:
Metabolic Derangement
of Glucose & Fats.

MANIFESTATION OF VITIATION

III. CLINICAL INTERPRETATION (Modern Correlation)

1. Metabolic Syndrome
(Syndrome X)

Cluster of conditions:
High BP, High Blood
Sugar, Excess Waist Fat,
Abnormal Cholesterol.

2. Dyslipidemia

Imbalance of lipids:
High Cholesterol, LDL,
Triglycerides; Low HDL.

3. Obesity (Sthaulya)

Excessive accumulation
of adipose tissue.

4. Pre-Diabetes /
Insulin Resistance

Cellular resistance to
insulin, linked to visceral fat.

5. Atherosclerosis

Hardening of arteries due
to plaque buildup
(disordered Meda
metabolism).

CHRONIC METABOLIC DISORDERS
& CARDIOVASCULAR RISK

@Yogesh_Gabhane

Component	Ayurvedic Term	Modern Clinical Correlate
Cause	Avyayama	Sedentary Lifestyle
	Medya Atibhakshana	High-Fat Diet
Symptom	Sveda Agama	Hyperhidrosis
	Kara Pada Suptata	Paresthesia / Neuropathy
Disease	Sthaulya / Prameha	Obesity / Diabetes Mellitus Type 2

Raktavaha Srotas (Blood Channels) according to Sushruta

1. MULA (Roots) – Sushruta Samhita, Sharira Sthana, 9/12

“Raktavāhiniinām mūlaṃ yakṛt plīhā ca raktavāhinyaśca dhamanyaḥ”

@Yogesh_Gabhane

Yakrut (Liver): Metabolism & Transformation
Pliha (Spleen): Storage & Maintenance

2. HETU (Etiology of Vitiation) – Based on *Rakta Dushti* (Sutra Sthana Ch. 21)

Dietary

Tejo, Amla, Lavana, Katu, Vidahi

Lifestyle

Excess Sun/Fire, Anger, Exertion

Substances

Alcohol (*Madya*), Poisons

Clinical Interpretation

Hepatotoxins (Alcohol, drugs), Infections (Hepatitis A, B, C), Nutritional (High-fat diet, NAFLD)

3. SROTODUSHTI / VIDDHA LAKSHANA (Symptoms of Injury)

– Sushruta Samhita, Sharira Sthana, 9/12

“Tatra viddhasya śyāvāṅgatvaṃ jvarō dāhaḥ pāṇḍutā śōṇitāgamaṇaṃ raktanetratā ca”

Shyavangata

Darkening / Cyanosis

Clinical: Hypoxia, Hemochromatosis, Liver failure pigmentation

Jvara

Fever

Clinical: Hepatitis, Liver abscess, Systemic inflammation (SIRS)

Daha

Burning sensation

Clinical: Neuropathy, Metabolic imbalance, Acute infection heat

Panduta

Pallor / Anemia

Clinical: Hemolytic anemia, Anemia of chronic disease, Poor hematinic storage

Shonitagama

Bleeding / Hemorrhage

Clinical: Coagulopathy (Clotting factor deficiency), Bleeding diathesis

Rakta Netrata

Redness of eyes

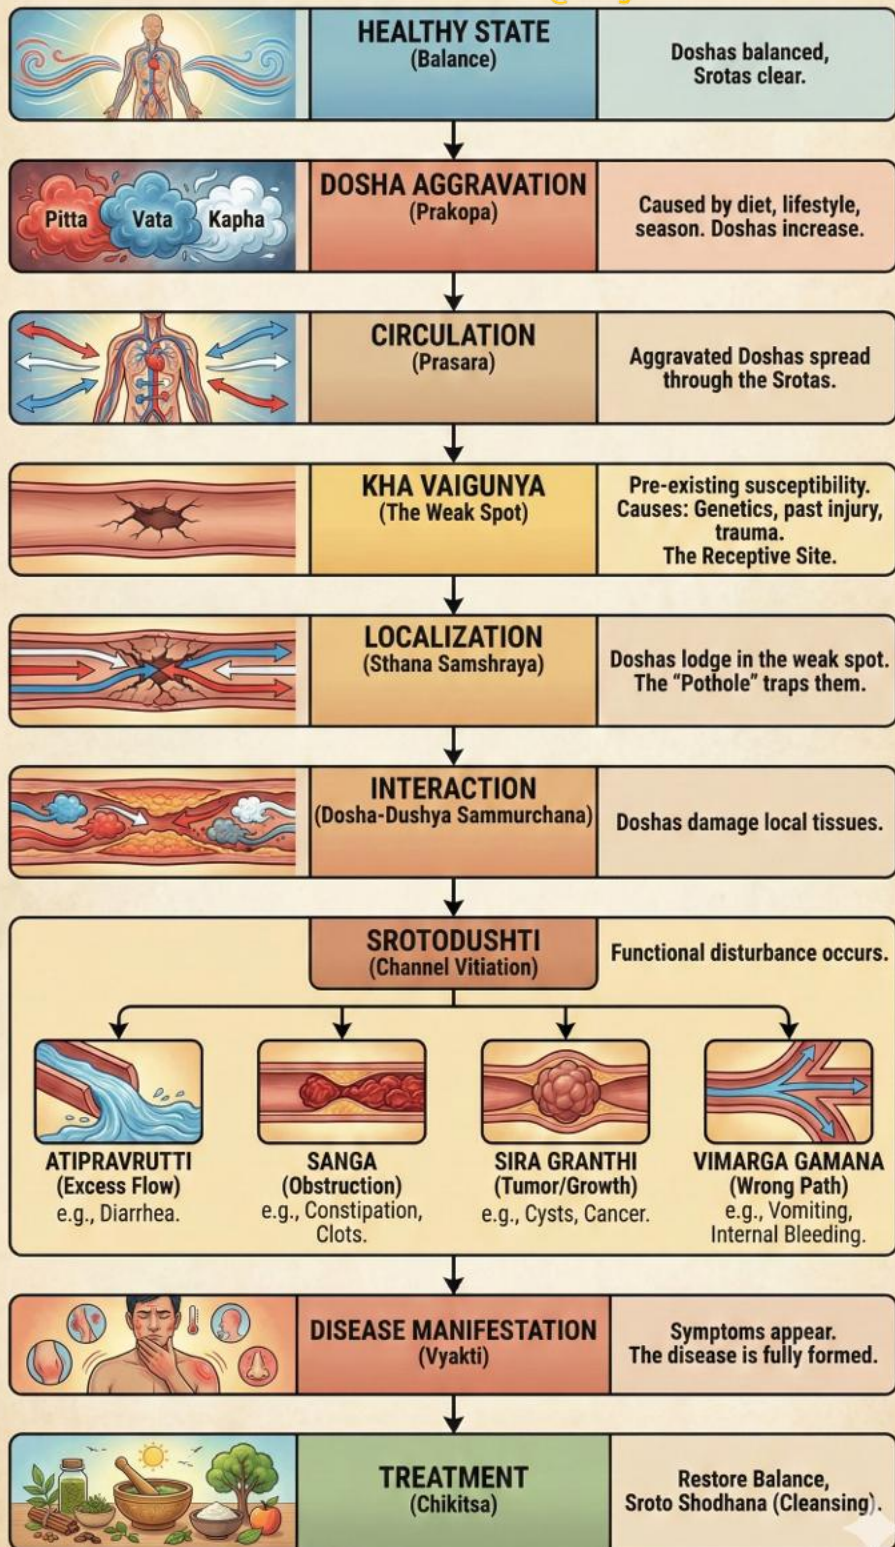

Clinical: Subconjunctival Hemorrhage, Severe systemic toxicity

Pathogenesis Summary

Trigger -> Liver/Spleen Disturbance -> Impaired Blood Formation/Clotting -> Manifestation of Symptoms

Ayurveda Disease Process: Kha Vaigunya to Srotodushti

@Yogesh_Gabhane

DOSHAGATI & PROGNOSIS (SADHYASADHYATA)

DOSHAGATI: Movement of Aggravated Doshas (Vata, Pitta, Kapha) from **Sthana** (Natural Seat)

@Yogesh_Gabhane

1. DIK DESHA

(Directional Movement)

Urdhva Gati (Upward)

E.g., Vomiting, Cough, Epistaxis.

Prognosis: **Sadhya** (Curable) - Treated by Virechana (Downward Purgation).

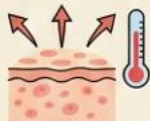

Adhah Gati (Downward)

E.g., Diarrhea, Menorrhagia.

Prognosis: **Yapya** (Difficult) - Treated by Vamana (Upward Emesis).

Tiryak Gati (Oblique)

E.g., Skin diseases, Fever.

2. ROGAMARGA

(Pathological Pathways)

Koshtha (GI Tract, Outer Pathway)

E.g., Fever, Vomiting.
Prognosis: **SUKHA SADHYA** (Easily Curable) - Accessible for medicine & elimination.

Shakha

(Tissues, Inner Pathway)

E.g., Edema, Skin issues.
Prognosis: **KRICHRA SADHYA** (Difficult) - Doshas get 'stuck', slow access.

Marma-Asthi-Sandhi

(Vital Organs/Bones/Joints, Middle Pathway)

E.g., Heart disease, Arthritis.
Prognosis: **ASADHYA / YAPYA** (Incurable / Manageable) - Deep-seated.

CRITICAL PROGNOSTIC SIGN:

Movement **Shakha** → **Koshtha** (Tissues to Gut) = **Improving** (Ready for Elimination).

3. PRAMANA

(Quantitative State)

Vridhhi (Increase)

Aggravated.
Active disease, but often easier to expel.

Sthana

(Normalcy)

Equilibrium.

Kshaya (Decrease)

Depleted.
Harder to treat (requires rebuilding strength).

SPECIAL CONCEPT: Ashayapakarsha Gati

Strong Vata displaces other Doshas (e.g., Pitta) to foreign sites.

Treat the VATA (the mover), not just the displaced Dosha, for correct prognosis.

SUMMARY:

Koshtha → **Shakha** = Worsening. **Shakha** → **Koshtha** = Improving.

Own Seat = Good. Foreign Seat = Bad.

ROGAMARGA & PROGNOSIS (SADHYASADHYATA)

ROGAMARGA: Disease Pathways used
to determine Prognosis (Curability)

@Yogesh_Gabhane

1. ABHYANTARA ROGA MARGA

(Internal Pathway /
Koshtha)

Components: Alimentary
Canal & Hollow Organs.

Examples: Fever (Jwara),
Diarrhea (Atisara),
Vomiting (Chhardi),
Constipation.

PROGNOSIS:
SUKHA SADHYA
(Easily Curable)

2. BAHYA ROGA MARGA

(External Pathway /
Shakha)

Components: 7 Tissues
(Rakta, Mamsa, Medas,
Tvacha).

Examples: Skin diseases
(Kushtha),
Edema (Shopha),
Tumors (Granthi), Goiter.

PROGNOSIS:
KRICHRA SADHYA
(Difficult to Cure)

3. MADHYAMA ROGA MARGA

(Middle Pathway /
Marma-Asthi-Sandhi)

Components: Vital
Organs (Marma), Bones
(Asthi), Joints (Sandhi).

Examples: Paralysis
(Pakshaghata), Arthritis
(Sandhivata),
Heart Disease (Hridroga).

PROGNOSIS:
YAPYA / ASADHYA
(Manageable / Incurable)

WHY?

Most accessible for
oral medicine.

Easy elimination via
Vamana/Virechana.

WHY?

Medicine must circulate
past physical barriers
(skin, fat).
Requires dual therapy
(internal + external).

WHY?

Deep-seated structural
damage.

Aggressive treatment risks
vital life force (Prana).

CLINICAL PROGNOSIS SUMMARY

SINGLE MARGA = BETTER
(e.g., only Stomach)

MIGRATION = WORSE
(e.g., Koshtha → Madhyama)

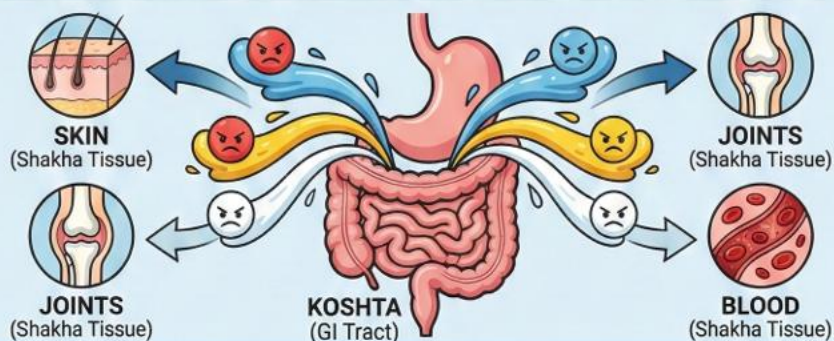

GOAL OF TREATMENT:
Bring Doshas from
Madhyama/Bahya →
KOSHTHA for elimination.

GOAL OF TREATMENT: Manageable/ Incurable.

THE TWO-WAY JOURNEY OF DOSHAS:

Koshta ↔ Shakha@Yogesh_Gabhane

1. KOSHTA → SHAKHA GATI (Pathogenesis / Disease Formation)

Significance: Doshas leave the gut to settle in tissues, creating disease.

Vyayamat (Exercise):
Excessive movement forces
Doshas out.

Ushmanaha Taikshnyat (Intense Heat):
Liquefies Doshas to flow.

Ahitacharanat (Improper Lifestyle): Wrong food & suppressing urges creates pressure.

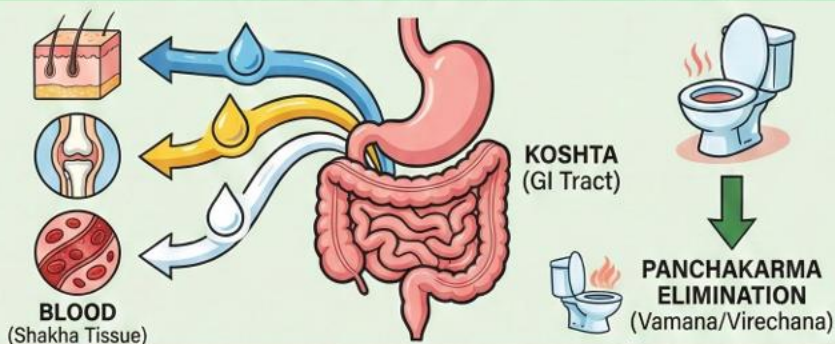

Drutatvat Marutasya (Speed of Vata): "Chala" quality blows Doshas like wind.

LEADS TO CHRONIC DISEASE (e.g., Arthritis, Psoriasis)

2. SHAKHA → KOSHTA GATI (Treatment / Cure)

Significance: Curative phase. Bringing stuck Doshas back to gut for expulsion.

Vridhhi (Increase):
Temporarily increasing volume to "overflow" back (Snehana).

Vishyandanat (Liquefaction):
Melting hardened Doshas with heat (Swedana).

Paka (Ripening): Digesting toxins (Ama) adhering Doshas to tissues.

Srotomukha Vishodhanat (Opening Channels): Clearing the path for return flow.

Vayu Nigrahat (Controlling Vata): Ensuring smooth, non-scattered flow.

Koshta → Shakha = **Worsening** → **Shakha** → Koshta = **Improving**

SUMMARY: Movement back to the KOSHTA is the key to CURE.

AMA (आम) - Ayurvedic Toxic Substance

DEFINITIONS OF AMA (आम निरुक्ति)

1. Due to Weak Agni (Digestive Fire)

ऊष्मणोऽल्पबलत्वेन धातुमाद्यमपाचितम् ।
दुष्टमामाशयगतं रसमामं प्रचक्षते ॥

(Ashtanga Hridaya Sutrashtana 13/25)

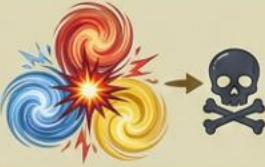

Diminished Agni leaves the first nutrient (Rasa) undigested, vitiated in the stomach, called Ama.

2. Due to Accumulation of Mala (Waste)

आविपक्वं असंचारि दुर्गन्धि बहु पिच्छिलम् ।
सदनं सर्वगात्राणां आम इत्यभिधीयते ॥

Undigested, stagnant, foul-smelling, slimy waste causing body weakness is Ama.

3. Due to Dosha Interaction (Ama Visha)

अन्ये दोषेभ्य एवातिदुष्टेभ्योऽन्योन्यमूर्च्छनात् ।
कोद्रवेभ्यो विषस्येव वदन्त्यामस्य सम्भवम् ॥

(Ashtanga Hridaya Sutrashtana 13/26)

Severely vitiated Doshas interacting produce a poison-like toxic Ama (Ama Visha), like poisonous Kodrava grain.

@Yogesh_Gabhane

TYPES OF AMA (आम भेदाः)

A. Based on Association (Sama Avastha)

Sama Vata (Wind + Ama) -

Sama Pitta (Fire + Ama) -

Sama Kapha (Water + Ama) -

Sama Dhatu (Tissue + Ama) -

Sama Mala (Waste + Ama) -

B. Based on Severity

Ama (Simple) -
[Mild cloudiness,
easier to treat]

Amavisha (Toxic Ama) -
[Virulent, dangerous]

SAMANYA LAKSHANA OF AMA (General Symptoms)

स्रोतोरोधबलभ्रंशगौरवानिलमूढताः । आलस्यापक्तिनिष्ठीवमलसङ्कारुचिकल्माः ॥

Difference between Āma Rasa and Āma Viṣa

Āma Rasa	Āma Viṣa
1. Manifest due to weakness in <i>Agni</i>	1. Manifest after the formation of <i>āma</i> , if person adopts improper dietetic and behaviour pattern.
2. It manifest is <i>āmāśaya</i> .	2. It manifests in <i>āmāśaya</i> and spreads to all over body quickly like poison
3. Responds to principle treatment of <i>āma</i>	3. Doesn't respond to principle treatment of <i>āma</i> due to antagonicity in the lines of treatment of <i>āma</i> with <i>āmaviṣa</i> i.e. hot therapies conducive to <i>āma</i> but aggravates <i>āma viṣa</i> and cold therapies conducive to <i>āma viṣa</i> but aggravates <i>āma</i> .
4. Gradual manifestation	4. Acute in onset
5. Diseases become curable, incurable or curable with difficulty	5. Disease becomes incurable
6. Involvement of <i>doṣās</i> , <i>duṣyas</i> and <i>Srotas</i> either singly or in combination and accordingly it manifest diseases.	6. Involvement of all the <i>doṣās</i> , <i>dhātus</i> , <i>malās</i> along with involving two or more <i>Srotas</i> .
7. Pathogenesis may be superficial or deep seated.	7. Always deep seated
8. Morbid <i>kapha doṣa lakṣaṇās</i> mimic with <i>āma</i> , that's why it mainly targets <i>kapha sthānās</i> and later spreads to all the sites.	8. It targets all the tissues.
9. Condition may not be fatal	9. Condition may become fatal and it may kill the individual.
10. It can be managed successfully	10. Don't treat other wise you will loose name and fame.

@Yogesh_Gabhane

COMPARISON OF ĀMA RASA & ĀMA VIṢA

@Yogesh_Gabhane

CONCEPT OF AMA:

ANNA RASA, MALA SANCHAYA, & DOSHA DUSHTI

1. Ama as Undigested ANNA RASA (Substrate View)

Process:
Jatharagni (Digestive Fire) in Amashaya transforms food into Ahara Rasa (Nutrient Essence) for absorption.

Pathology:
Weak Agni (Mandagni) fails to fully cook food, leaving it in a "half-cooked" state.

Result (Ama):
Undigested Anna Rasa ferments, becomes sour (Shukratva). Circulates but cannot nourish tissues.

[cite: 13367.png]

2. Ama as MALA SANCHAYA (Waste Accumulation View)

Process:
Metabolism normally separates nutrients (Prasada) from waste (Kitta) for elimination (sweat, urine, feces).

Pathology:
Disturbed digestion blocks separation. Waste doesn't form properly, turning into morbid sludge.

Result (Ama):
Accumulates as sticky (Picchila), foul-smelling (Durgandha), and stagnant (Asanchari) sludge. Weighs down tissues.

[cite: 13367.png]

3. Ama from DOSHA DUSHTI (Dosha Interaction View)

Process:
The three Doshas (Vata, Pitta, Kapha) normally govern physiology.

Pathology:
Severe vitiation leads to interaction (Anyonya Murchana) between Doshas, forming a new chemical.

Result (Ama Visha):
Forms toxic Ama (Ama Visha), comparable to poison. Spreads quickly and is life-threatening.

[cite: 13367.png]

SUMMARY COMPARISON			
Perspective	ANNA RASA (Digestion)	MALA SANCHAYA (Elimination)	DOSHA DUSHTI (Bio-energies)
Key Characteristic	Unprocessed (Avipaka)	Stagnant & Foul (Durgandha)	Toxic/Poisonous (Visha)

CONCEPT OF SAMA (सम) IN AYURVEDA

DEFINITION & MEANING

Sama = Sa (With) + Ama (Toxin)

Pathological state: Doshas, Dhatus, Malas mixed/obstructed with Ama.

@Yogesh_Gabhane

MECHANISM OF SAMA

Ama forms in Stomach due to Weak Digestion (*Mandagni*).

Ama circulates, is sticky (*Picchila*) & heavy (*Guru*).
Adheres to Doshas/tissues, disrupting function.

SAMA AVASTHA OF DOSHAS (Sama Dosha Symptoms)

A. SAMA VATA (Vata + Ama)

Vibandha
(Constipation)

Agni Sada
(Loss of appetite)

Tandra
(Drowsiness)

Antra Kujana
(Gurgling)

Vedana (Pricking pain)

Shoth (Edema)

B. SAMA PITTA (Pitta + Ama)

Durgandha
(Foul smell)

Harita-Shyava
(Discoloration)

Amla Ruchi
(Sour taste)

Hridaya Gaurava
(Heart heaviness)

Daha
(Burning sensation)

C. SAMA KAPHA (Kapha + Ama)

Avila
(Turbidity)

Tantumut
(Stringy mucus)

Durgandha
(Foul smell)

Kanthopalepa
(Sticky throat)

Vibandha
(Blockage)

SAMA MALA (The Diagnostic Test) - Water Test (*Jala Nimajjana Pariksha*)

Sama Purisha
(Stool with Ama)

Sinks (Heavy, dense, foul, sticky)

Nirama Purisha
(Stool without Ama)

Floats (Light, proper digestion)

CLINICAL SIGNIFICANCE

Contraindication of Sodhana (Panchakarma)

Cannot perform immediately.
Like squeezing unripe fruit - destroys body.

Line of Treatment (3 Steps)

Pachana (Digestives) & **Deepana**
(Appetizers) to "ripen" Ama.

Condition becomes
Nirama (free of Ama).

Doshas expelled via
Sodhana (Panchakarma).

SUMMARY COMPARISON: SAMA VS. NIRAMA

Feature	SAMA (With Ama)	NIRAMA (Without Ama)
Meaning	Mixed with toxins	Pure, free of toxins
Smell	Foul / Offensive	Natural / Mild
Body Feeling	Heavy, Lethargic, Blocked	Light, Energetic, Clear
Appetite	Poor / Blocked	Good / Strong
Treatment	Langhana / Pachana	Shamana / Sodhana

Dosha & Pureesha State

**SAMA
(With Toxins)**

**NIRAMA
(Without Toxins)**

**VATA DOSHA
(Air & Ether)**

Sama Vata

Severe Constipation Pricking Pain

Gurgling Noise Lethargy
Vibandha, Agni Sada.
Toda, Staimitya.
Antra Kujana, Alasya.
Worsens with Oil/Cold.

Nirama Vata

Free Bowels Dryness

Clarity Lightness
Nirvibandha.
Ruksha, Vishada.
Laghu, Clear Wind.
Relieved by Oil.

Sama Pitta

Foul Smell Sour Taste

Greenish Color Acidity
Durgandha, Amla.
Harita/Shyava.
Amlapittakara (Daha).
Guru, Sthira.

Nirama Pitta

No Foul Smell Pungent Taste

Reddish/Yellow Color Improved Appetite
Nirgandha, Katu/Tikta.
Tamra/Peeta.
Vanhibala Vardhana.
Ushna/Teekshna (Sara).

Sama Kapha

Cloudy/Slimy Foul Smell

Throat Coating Suppressed Appetite
Avila, Tantula.
Durgandha.
Kantha Upalepa.
Kshudha Nasha.

Nirama Kapha

Frothy/Bubbly Whitish Color

Easy to Separate Clean Mouth
Phenavan, Pandu.
Nirgandha.
Chedavana (Pindita).
Vaktrashuddhi.

Sama Pureesha

Sinks in Water Foul Odor

Sticky/Mucoid Unformed/Clay-like
Jala Nimajjana (Sinks).
Ati-Durgandha. Picchila.
Unformed.
Abdominal Pain.

Nirama Pureesha

Floats on Water Characteristic Smell

Non-Sticky Well-formed
Jala Nimajjana (Floats).
Normal Smell. Non-sticky.
Well-formed.
Feeling of Lightness.

**PUREESHA
(Stool)**

**PITTA DOSHA
(Fire & Water)**

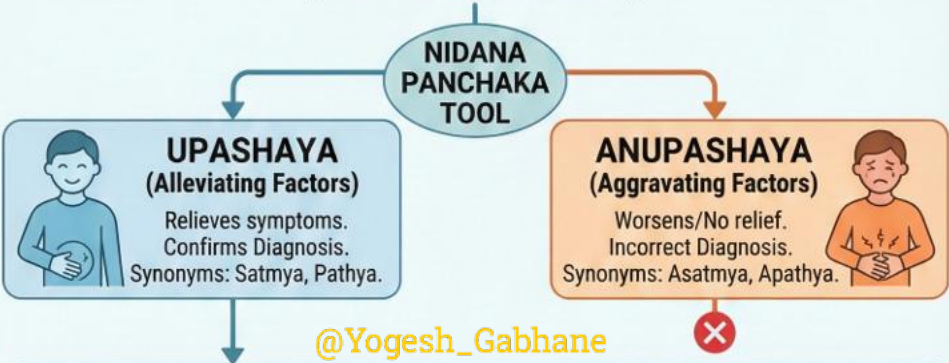

**KAPHA DOSHA
(Water & Earth)**

**PUREESHA
(Stool)**

@Yogesh_Gabhane

@Yogesh_Gabhane

AYURVEDIC DIAGNOSIS: UPASHAYA & ANUPASHAYA (TRIAL & ERROR)

18 TYPES OF UPASHAYA (based on Principle & Modality)

PRINCIPLE:		A. VIPARITA (Opposite to...)			B. VIPARITARTHAKARI (Paradoxical/Similar to...)		
I/IV. HETU (Cause)		Aushadha (Med) 	Anna (Diet) 	Vihara (Life) 	Aushadha (Med) 	Anna (Diet) 	Vihara (Life) 
		 Shunthi (Hot) for Cold Fever	 Mamsa Rasa (Heavy) for Fasting Vata	 Night Waking (Dry) for Day Sleep Kapha	 Warm Poultice for Pitta Abscess	 Vidahi Food for Pitta Blisters	 Bhaya (Fear) for Vata Unmada
		Opposes cold cause.	Opposes lightness.	Opposes moisture.	Hastens ripening (hot on hot).	Speeds up resolution (burning on burning).	Shock resets mind (fear is Vata-like).
II/V. VYADHI (Disease)		 Haridra for Prameha (Diabetes)	 Masura (Binding) for Atisara (Diarrhea)	 Pravahana (Straining) for Udavarta	 Madanaphala for Vomiting	 Milk (Laxative) for Diarrhea (Pravahika)	 Pravahana (Straining) for Vomiting
		Disease-specific action.	Stops loose motion.	Forces Vata down.	Induces vomit to clear irritants.	Clears bowel to stop urges.	Paradoxically checks the urge.
		 Dashamula for Vata Swelling	 Takra (Light/Astringent) for Grahani (IBS)	 Swimming for Urusthambha	 Agaru (Hot) for Fire Burns	 Alcohol for Alcoholism (Madatyaya)	 Swimming for Vata Gulma
		Pacifies Vata & reduces swell.	Counters Kapha & loose bowel.	Exertion (Vata) & movement reduce stiffness.	Prevents blisters, pacifies heat.	Tapers withdrawal symptoms.	Movement breaks the lump (paradoxical for Vata).
III/VI. UBHAYA (Both)							

HETU (NIDANA): Definition, Synonyms & Classification

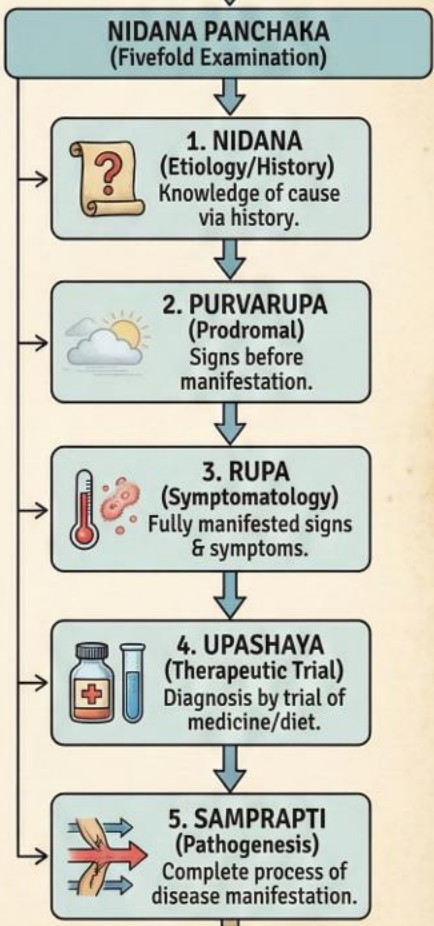

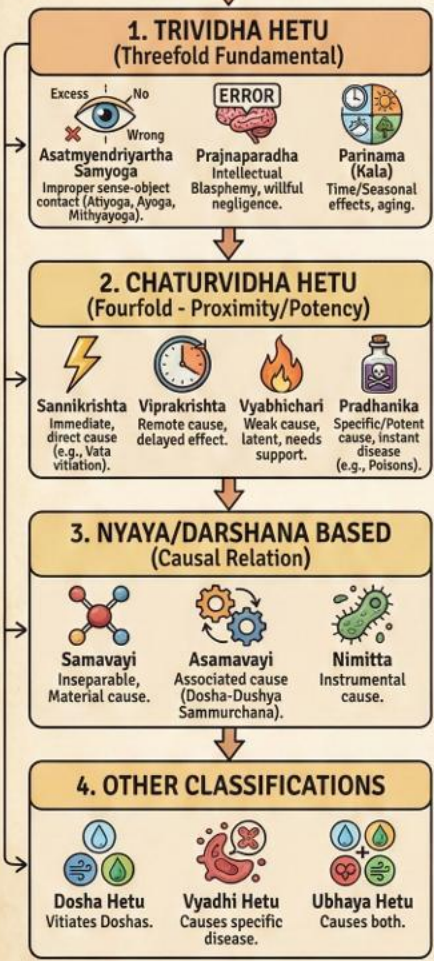

Fundamental cause, acts as the seed (Beeja) for disease origin.
Madhava Nidana: 'Seiyate dukham anena iti hetu'.
Charaka: 'Yat tu vyadhi janakam tat nidanam'.

@Yogesh_Gabhane

A. VYADHI JANAKA NIDANA (ETIOLOGICAL - Produces Disease)

B. VYADHI BODHAKA NIDANA (DIAGNOSTIC - Reveals Disease)

SUMMARY: Vyadhi Janaka PRODUCES disease; Vyadhi Bodhaka REVEALS disease.

IMMUNITY (DEFENSE SYSTEM)

Biological capability to resist harmful foreign substances (bacteria, viruses, toxins). Identifies & neutralizes "non-self" invaders.

@Yogesh_Gabhane

INNATE IMMUNITY (NON-SPECIFIC)

Present at birth.
Immediate, general
protection.
No memory.

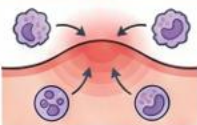

PHYSICAL BARRIERS
Skin, Mucous
membranes, Cilia.

CHEMICAL BARRIERS
Stomach acid, Tears
(lysozyme), Saliva.

CELLULAR DEFENSES
Phagocytes (Macrophages,
engulf & destroy. NK cells.

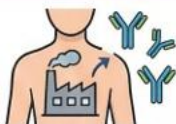

INFLAMMATORY RESPONSE
Redness, Heat, Swelling.
Isolates damage,
attracts immune cells.

ADAPTIVE IMMUNITY (SPECIFIC)

Develops after exposure.
Delayed response.
Has immunological memory.

ACTIVE IMMUNITY
Body produces own
antibodies.
Long-lasting
(often lifelong).

NATURAL ACTIVE
Recovering from actual
infection (e.g., chickenpox).

ARTIFICIAL ACTIVE
Vaccination (harmless
antigen trains body).

PASSIVE IMMUNITY
Receives pre-made
antibodies.
Temporary protection.

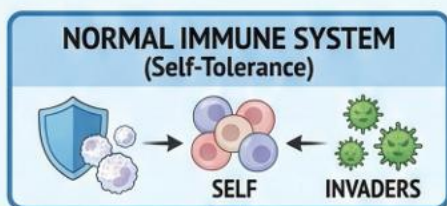

NATURAL PASSIVE
Mother to child via
placenta or breast milk.

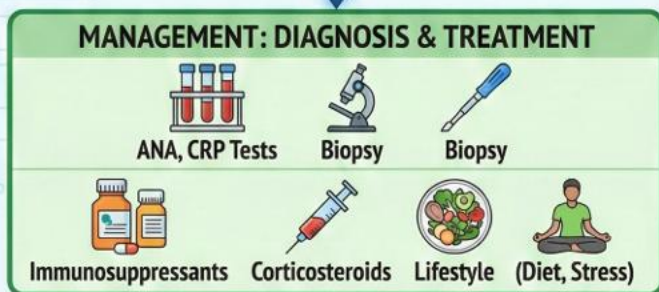

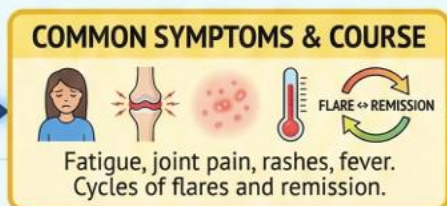

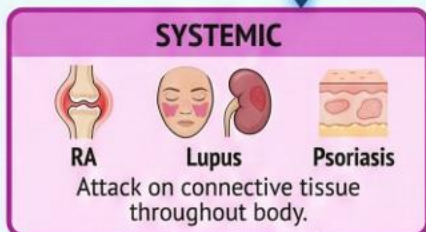

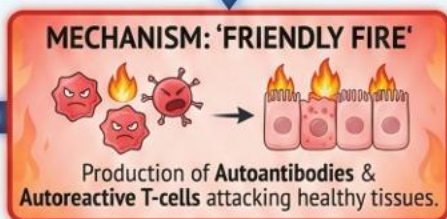

ARTIFICIAL PASSIVE
Injection of antibodies
(e.g., anti-venom).

AUTOIMMUNE DISEASE: CONCEPTS & FLOW

@Yogesh_Gabhane

AYURVEDA: POORVAROOPA (PRODROMAL SYMPTOMS)

POORVAROOPA

Definition: Early signs & symptoms before full disease manifestation.
2nd component of Nidana Panchaka.

Occurs during **Sthana Samshraya** (Dosha-Dushya interaction begins).

Key: Indicates impending disease, milder than full symptoms (**Rupa**).

1. SAMANYA POORVAROOPA (General Prodrome)

Nature: General signs indicating approach of a disease.

Behavior: DO NOT indicate specific Dosha. Often disappear when actual disease manifests.

Example: Fatigue (Angamarda) preceding Fever (Jwara), regardless of type.

2. VISHESHA POORVAROOPA (Specific Prodrome)

Nature: Specific signs indicating BOTH coming disease & specific DOSHA.

Behavior: Predicts dominant Dosha. Typically intensify into the full disease (**Rupa**).

Example in Jwara: Excessive Yawning (Vata), Burning Sensation (Pitta), Aversion to Food/Heaviness (Kapha).

@Yogesh_Gabhane

CLINICAL SIGNIFICANCE

1. EARLY INTERVENTION:

Easier to treat at this stage (Sukha Sadhya) before full tissue damage.

2. PROGNOSIS (ARISHTA):

Simultaneous, intense manifestation of all PoorvarooPa often indicates poor prognosis or incurable condition (Asadhya).

AYURVEDA: ROOPA (MANIFESTED SYMPTOMS)

ROOPA

Definition: Fully manifested signs & symptoms.
3rd component of Nidana Panchaka.
Occurs during Vyakta Avastha (Stage of Manifestation).
Key: Specific clinical features, confirms diagnosis & involved Doshas.

SYNONYMS (*Paryaya*)

Linga, Lakshana, Chihna, Akriti, Sansthana.

@Yogesh_Gabhane

TYPES OF ROOPA

1. SAMANYA ROOPA (General Symptoms)

Purpose: Helps diagnose the DISEASE entity.

Example: In Jwara (Fever), Santapa (rise in temp) & Aruchi (anorexia) are present regardless of cause.

2. VISHESHA ROOPA (Specific Symptoms)

Vataja
Shivering,
body ache

Pittaja
Burning
sensation,
red eyes

Kaphaja
Heaviness,
excessive
salivation

Purpose: Helps diagnose the SUBTYPE & specific DOSHA.

Example: Vataja (Shivering), Pittaja (Burning), Kaphaja (Heaviness).

ADVANCED CLASSIFICATION

Pratinitya Linga
(Pathognomonic Signs)

Avastika Linga
(Stage-specific Symptoms)

Upadrava Roopa
(Complications)

CLINICAL SIGNIFICANCE

**1. VYADHI VINISHCHAYA
(Diagnosis):** Primary tool
for confirming disease.

**2. AMSHA-AMSHA KALPANA
(Fractional Analysis):**
Understand specific Guna of
Dosha.

3. PROGNOSIS: Intense
presence of all Roopa often
indicates difficult (Kashta
Sadhya) or incurable
(Asadhya) condition.

AYURVEDA: SADHYASADHYATVA (PROGNOSIS)

@Yogesh_Gabhane

SADHYA (CURABLE)

1. Sukha Sadhya
(Easily Curable)

Patient Factor

1 Dosha, Eka Marga

Recent Onset

Good Resources

Easy cure. Strong patient, single Dosha, recent onset, no complications, good resources.

2. Krichra Sadhya
(Difficult to Cure)

2 Doshas, Samsarga

Purana

Requires Surgery/Agni Complicating factor

Complicating factor

Difficult cure. Two Doshas, chronic, deep-seated, requires intensive treatment (surgery/strong meds).

ASADHYA (INCURABLE)

3. Yapya
(Manageable / Palliable)

Pathya Seva

Building Support

Deep-seated

Manageable, not curable. Life depends on continued treatment & strict regimen. Relapses without support.

4. Anupakrama
(Absolutely Incurable)

Inflamed & Chaotic

Arishta Lakshana

Fading Vital Sign

Doctor

Impossible cure. Severe Tridosha vitiation, fatal signs, systemic failure. Does not respond to treatment.

Type	Cure Possibility	Dosha	Key Feature
Sukha Sadhya	Easy	1	Recent, Strong Patient
Krichra Sadhya	Difficult	2	Chronic, Intensive Tx
Yapya	Manageable	Mixed	Continuous Support
Anupakrama	Impossible	3	Fatal Signs (Arishta)

AYURVEDA: SADHYASADHYATVA (PROGNOSIS)

SADHYA (CURABLE)

1. Sukha Sadhya
(Easily Curable)

Patient Factor

1 Dosha, Eka Marga

Recent Onset

Good Resources

Easy cure. Strong patient, single Dosha, recent onset, no complications, good resources.

2. Krichra Sadhya
(Difficult to Cure)

2 Doshas, Samsarga

CHRONIC

Purana

Requires Surgery/Agni Complicating factor

Difficult cure. Two Doshas, chronic, deep-seated, requires intensive treatment (surgery/strong meds).

@Yogesh_Gabhane

ASADHYA (INCURABLE)

3. Yapya
(Manageable / Palliable)

Pathya Seva

Building Support

Deep-seated

Manageable, not curable. Life depends on continued treatment & strict regimen. Relapses without support.

4. Anupakrama
(Absolutely Incurable)

Inflamed & Chaotic

Arishta Lakshana

Fading Vital Sign

Doctor

Impossible cure. Severe Tridosha vitiation, fatal signs, systemic failure. Does not respond to treatment.

Type	Cure Possibility	Dosha	Key Feature
Sukha Sadhya	Easy	1	Recent, Strong Patient
Krichra Sadhya	Difficult	2	Chronic, Intensive Tx
Yapya	Manageable	Mixed	Continuous Support
Anupakrama	Impossible	3	Fatal Signs (Arishta)

VIKRITITAHARA PAREEKSHA:

Assessing **Vyadhi Bala** (Strength of Disease) by analyzing deviation from **Prakriti** (Natural Healthy State)

1. HETU (Etiology/Cause)

Investigates Causative Factors.

Logic: Potent cause + long exposure = Strong disease.

2. DOSHA (Bodily Humors)

Identifies vitiated Dosha(s) & extent.

Logic: Tridoshaja (all three) is stronger than Ekadoshaja (single).

@Yogesh_Gabhane

3. DUSHYA (Affected Tissues)

Examines involved Tissues (Dhatus) & Wastes (Malas).

Logic: Deeper tissues (e.g., Asthi, Majja) mean more severe disease.

4. PRAKRITI (Constitution)

Compares disease nature with patient's constitution.

Logic: Tulya (similar) types (e.g., Kapha person with Kapha disease) = Stronger disease.

5. DESHA (Habitat/Location)

Considers geographical region.

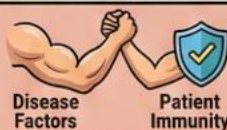

Logic: Region aggravating the same Dosha (e.g., Kapha disease in marshy land) = Stronger disease.

6. KALA (Time/Season)

Notes season & time of manifestation.

Logic: Season naturally aggravating the Dosha (e.g., Pitta disease in Autumn) = Stronger disease.

7. BALA (Strength)

Evaluates strength of Cause vs. Immunity.

Logic: Stronger cause relative to immunity increases disease strength.

IMPORTANCE OF VIKRITITAHARA PAREEKSHA

Determining Prognosis (Sadhyasadyata)

Predicts Outcome:

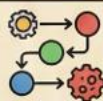

Sukha Sadhya (Easy),
Krichra Sadhya (Difficult),
Asadhya (Incurable).

Deciding Treatment Strength

Matches Therapy Potency:

Strong Disease = Strong
Therapy (Shodhana/Tikshna);
Weak Disease = Mild Therapy
(Shamana/Mridu).

Understanding Pathogenesis (Samprapti)

Traces disease
progression for
Nidana Parivarjana
(avoiding causes).

UPADRAVA: The Concept of Complications in Ayurveda

1. Definition & Etymology: Secondary Disease following a Primary One.

Upa = Secondary to,
Following

Drava: Occurrence

@Yogesh_Gabhane

Classical Definition (Charaka): *Rogottarakalajo...*
– Arises **AFTER** main disease, **DEPENDENT** on it.

2. Key Characteristics

Dependency

Dependent: No independent existence.

Same Etiology

Same Doshas/Nidana as primary disease.

Timing

Later Stage: Appears after primary disease est.

Severity

More Painful: Patient already weakened.

3. Classification

Sthoola (Major)

Severe, distinct.
May need separate, immediate Rx. e.g., Shock in Gastroenteritis.

Anu (Minor)

Mild, less distinct.
Subsides with primary disease Rx. e.g., Body ache in Cold.

4. Importance - Prognosis (Sadhyasadhyata)

Sadhya (Curable): No or Mild Upadrava.

Krichra Sadhya (Difficult): Manageable Upadrava.

Asadhya (Incurable): Multiple/Severe Upadrava.

5. Importance - Treatment (Chikitsa)

General Rule:

Treat **MAIN** Disease first, Upadrava subsides.

CRITICAL EXCEPTION: If Sthoola & Life-threatening, treat Upadrava **FIRST** or simultaneously without contradiction.

6. Key Difference: Vyadhi vs. Upadrava

Vyadhi (Primary)

Origin: Own causes.
Timing: First.
Independence: Independent.

Upadrava (Complication)

Origin: From Primary.
Timing: Later.
Independence: Dependent.

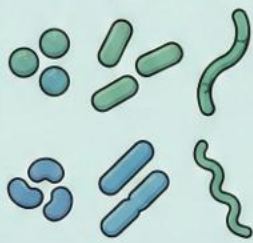

VIRUSES:

Acellular, obligate parasite.
DNA or RNA core, protein capsid.

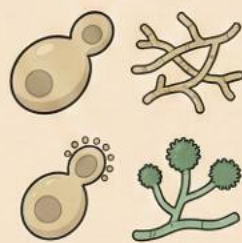

BACTERIA:

Prokaryotic, single-celled.
No nucleus.
Peptidoglycan cell wall.
Binary fission.

FUNGI:

Eukaryotic, single/multi-celled. True nucleus.
Chitin cell wall.
Heterotrophs.

CLASSIFICATION BY:

1. GENETIC MATERIAL (DNA, RNA)

2. SHAPE (Helical, Icosahedral, Complex)

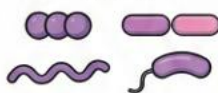

3. ENVELOPE (Enveloped, Non-enveloped)

CLASSIFICATION BY:

1. SHAPE (Cocci, Bacilli, Spirilla, Vibrio)

2. CELL WALL (Gram-Positive, Gram-Negative)

3. OXYGEN REQ. (Aerobes, Anaerobes, Facultative)

CLASSIFICATION BY:

1. MORPHOLOGY (Yeasts, Molds)

2. DIMORPHIC (Mold at 25°C, Yeast at 37°C)

COMPARISON TABLE

FEATURE	VIRUS	BACTERIA	FUNGI
Cell Type	Acellular (X)	Prokaryotic (No)	Eukaryotic (Yes)
Nucleus	Acellular (X)	Prokaryotic (No)	Eukaryotic (Yes)
Genetic Material	DNA/RNA (X)	DNA	DNA
Reproduction	Replication (Inside Host)	Binary Fission (X)	Budding/Spores (X)
Treatment	Antivirals/Vaccines (Pill/Syringe)	Antibiotics (Pill)	Antifungals (Pill)

NUTRITIONAL DISORDERS & VITAMIN DEFICIENCIES

MACRO NUTRITIONAL DISORDERS

(PEM - Protein-Energy Malnutrition)

A. MARASMUS

Deficiency:
Calories & Protein.

Symptoms:
Extreme muscle/fat wasting, shrunken face, no edema, stunted growth.

B. KWASHIORKOR

Deficiency:
Protein (adequate calories).

Symptoms:
Edema (swelling), fatty liver (potbelly), skin/hair changes.

C. OBESITY

Excess:

Calories > Expenditure

Symptoms: Excess body fat, increased risk of diabetes & heart disease.

WATER-SOLUBLE VITAMIN DEFICIENCY DISORDERS

(Need daily replenishment)

VITAMIN C (Scurvy)

Scurvy: Bleeding gums, poor wound healing, joint pain.

VITAMIN B1 (Beriberi)

Wet

Dry

Beriberi: Wet (heart failure), Dry (nerve damage), Wernicke-Korsakoff.

VITAMIN B2 (Ariboflavinosis)

Cheilosis (cracks), **Glossitis** (magenta tongue), red eyes.

VITAMIN B3 (Pellagra)

Pellagra (4 D's): Dermatitis, Diarrhea, Dementia, Death.

VITAMIN B9 (Folate)

Megaloblastic Anemia, **Neural Tube Defects**.

VITAMIN B12 (Cobalamin)

Pernicious Anemia with nerve damage (tingling, balance).

FAT-SOLUBLE VITAMIN DEFICIENCY DISORDERS

(Stored in body)

VITAMIN A (Retinol)

Night Blindness, **Xerophthalmia** (dry eye), **Bitot's Spots**.

VITAMIN D (Calciferol)

Rickets (child deformities), **Osteomalacia** (adult soft bones).

VITAMIN E (Tocopherol)

Hemolytic Anemia (RBC destruction), muscle weakness.

VITAMIN K (Phylloquinone)

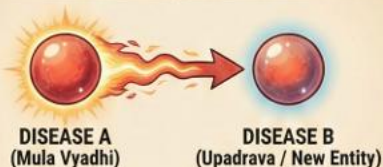

Hemorrhagic Disease: Uncontrolled bleeding (impaired clotting).

AYURVEDIC PATHOLOGICAL CONCEPTS: VYADHISANKARA & NIDANARTHAKAR ROGA

NIDANARTHAKAR ROGA (Disease as a Cause)

DEFINITION & MECHANISM

One existing disease becomes the Causative Factor (Nidana) for another. Acts as a linear CHAIN REACTION.

TYPES

(Based on Outcome)

1. Ekarthakari (One-way)

Primary causes secondary, then subsides. Only secondary remains.

2. Ubhayarthakari (Mutual)

Primary causes secondary, both persist together. Harder to treat.

CLASSICAL EXAMPLES (Charaka Nidana 8)

PRATISHYAYA
(Coryza - Runny Nose)

KASA
(Cough)

KSHAYA
(Phthisis/TB)

SHOSHA
(Wasting)

Progression chain: Coryza leads to Cough, then TB, then Wasting.

JWARA
(Fever)

RAKTAPITTA
(Bleeding)

CLINICAL RELEVANCE

Decide to treat the primary cause to stop the chain, or the secondary if it's stronger.

VYADHISANKARA (Complication/Mixture of Diseases)

DEFINITION & MECHANISM

Complex AMALGAMATION of multiple diseases or symptoms. Obscures clear diagnosis. Simultaneous complexity.

CAUSES OF VYADHISANKARA

1. Prayoga Aparishuddhi (Improper Tx)

Improper therapy (e.g., unfit Vamana, Mithya Yoga).

2. Anyonya Sambhava (Mutual Interaction)

Distinct pathologies overlap with contradicting symptoms.

EXAMPLE

IMPROPER VAMANA

NAVAJWARA
(Acute Fever)

HRIDROGA
(Heart Complication)

Improper Vamana in acute fever leading to heart disease. A mixed state.

CLINICAL RELEVANCE

Extreme caution needed. Avoid strong Shodhana. Use gentle SHAMANA (palliative care) that doesn't aggravate either condition. Diagnosis is difficult (Kashta Sadhya).

@Yogesh_Gabhane

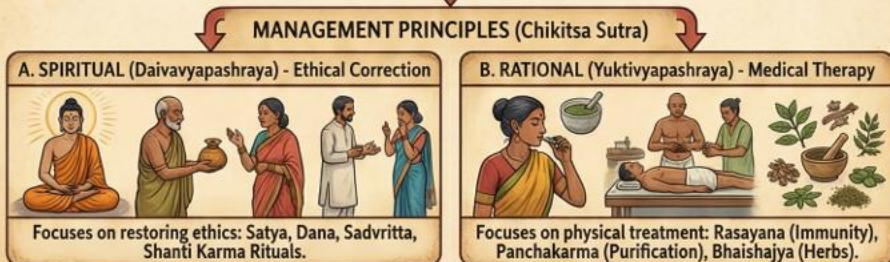

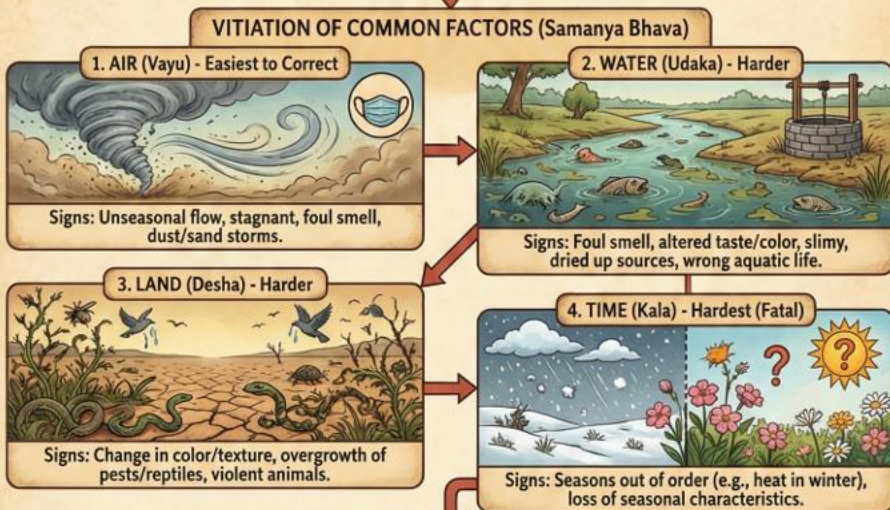

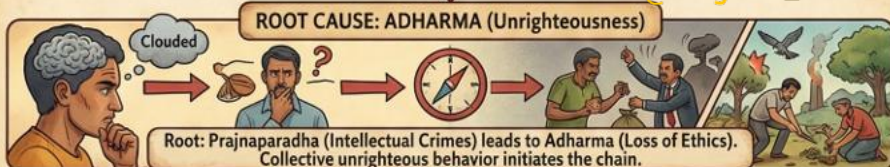

JANAPADODHWANSA:

The Ayurvedic Concept of Epidemics & Pandemics
