

Classification of Rasa dravya and its Rationality

- **Classification is a systematic arrangement into groups based on perceived common characteristics.**
- **In Rasa Rasa shastra along with Mercury many other Minerals, Metals, Precious stones, Alkaline compounds, calcium compounds etc are in use for various pharmaceutical purposes.**
- **The term Rasa in R.S stands for Parada which is most prominent drug with immense therapeutic activity.**

- All other remaining drugs are counted next to it, as they all in one or the other way support in making Parada therapeutically more potent.
- The other drugs belong to the Mineral, Plant and animal sources are included under Maharasa, Uparasa, Sadharana rasa, Dhatu varga, Ratna varga, Uparatna varga etc.
- There are different opinions among the Acharyas regarding grouping of these drugs, which is purely based on their practical experiences.
- That's why it is hard to find complete uniformity in the opinions expressed about Rasa dravya classification.

- Most of the drugs have been classified in different groups on the basis of their usefulness towards Mercury and its various processes, concerned to Lohavada and Dehavada.
- Classification of Rasa dravya indeed a significant step towards theoretical standardization in the field of Rasa shastra.
- To find out the probable rationale behind different types of Approaches in classification of Rasa dravya one needs to keenly understand the Physico - chemical properties and Pharmaceutico - Therapeutical utility of these drugs.

The factors are - as follows.

1. Pharmaceutical significance and the extent of their usefulness towards Mercury and mercurial processing's.
2. In earlier text books more emphasis was given to Lohavada rather than Dehavada, thus the drugs which were used for Lohavada were grouped first and then the remaining drugs which are used for Dehavada.
3. Depending on the extraction of Satva or essence. More satva yielding minerals may be included under Maharasa and lesser satva yielding minerals in Uparasadi varga.
4. Depending upon their Physico - Chemical properties, Hardness, Melting point, Chemical composition etc (Satva lohas, Puti lohas etc)

5. Drugs may be classified according to their therapeutic utility and also their toxic effects.
6. According to their source, availability and feasibility.
7. Based on the preciousness, cost and external appearance of the drugs. E.x; Ratnas, Uparatna etc.
8. According to the Rasayana effect of the drugs. Abhraka and Gandhaka are considered as best Rasayana drugs.
9. According to the experience, time period, place or area they belonged to.
10. Aptopadesha – advise from wise men .

महारस

- The first description of this group is found in Rasarnava and as Rasa varga in Rasa Hrudaya tantra and Rasendra Mangala.
- As regards to the number of Maharasa is concerned almost all texts except Rasendra Mangala and Rasa Paddhati mentioned 8 drugs. R.M- 4 and R.P – 6 drugs.
- The books like Rasa Hrudaya tantra, Goraksha Samhita and Rasa Ratna Samucchaya mentioned a separate classification called Rasa Varga, in which they added Hingula, Kantaloha, Anjana and Hingula.

रसकं विमला ताप खंपला तुत यञ्जनम्
हिङ् सुं सर कं चैव रु सा एते महारसाः ॥ R.R.S 6/49

These are the 8 Maharasa drugs should be kept on the tip of Ashtadala Kamala patra, in Rasa Mandapa starting with east and ending at Eshanya direction.

But the widely accepted Maharasa varga dravyas are as follows

अभ्रवैक्रां तमाक्षिक विमलाद्रिज सर कम्
चपलोरसकश्चेति ज्ञात द्धौ संग्रहेद्रसान् ॥ R.R.S 2/1

1. अभ्रक - Mica or Silicates of Fe, Mg, Al, K, Li, $(\text{SiO}_4)_3$ etc
2. वैक्रान्त - Tourmaline, Silicate of Mg, Mn, Fe, Ca, Na, K, Li, F, B_2Al_3 , $(\text{SiO}_4)_3$ etc .
3. माक्षिक - Chalcopyrite / Copper pyrite CuFeS_2 or FeS_2
4. विमल - Iron pyrite - Fe_2S_3
5. अद्रिज - Black bitumen / Mineral pitch / Asphaltum punjabinum
6. सरक - Peacock ore or Cu_5FeS_4 / Copper Sulphate $\text{CuSO}_4 \cdot 7\text{H}_2\text{O}$
7. चपल - Selenium or Se / Bismuth or Bi
8. रसक - Zincite or Zinc oxide / ZnO

अभ्रक (Mica)

Synonyms

अभ्रकं गगनं भृङ् मभ्रं खं व्योमनामकम्
वज्रं घनञ्च गिरिजं बहुपत्रमनन् कम्
आकशमंबरं शुभ्रं त बलं गरजध्वम्
मेघाख्यं त्रिदिवं तदेव परिकीर्तितम् | R.T.10/1-2

The synonymous words of Sky, cloud and bird are attributed to Abhraka such as

Sky - Gagana, Vyoma, Akasha, Ambara, Shubhra, Antariksha, Ananta etc

Cloud – Megha, Garajadhwaja, Ghanam

Bird – Bhringa, Kham, Khaga, etc

History :

- 1st reference can be traced from Koutilya arthashastra (4th cent BC). The word Vajrabhraka along with Parada, in the context of artificial gold preparation, can be seen.
- In Nyaya Drashana (4th cent BC) Abhraka is mentioned as one of the transparent drug apart from Kacha and Sphatika.
- In Amarakosha (6th cent) the drug named Girijamala or Gouribeeja (Abhraka) is specified for Dhatusvada purpose.
- The therapeutic use of Abhraka is mentioned for the 1st time in Ashtanga Hrudaya, as one of the ingredient in Kasisadi Taila meant for external use in Arsha roga Chikitsa.

Mythological origin

देव्या रजो भवेद् गन्धोतुः शुक्रं तथाभ्रकम् | R.R.S 2/1

- Gandhaka is considered as Rajas of Parvati
- Abhraka is considered as the Shukra of Parvati.

प्राप्तिस्थान -

राजहस्तादधरं त्वासमानीतं घनं खनेः

भवेत्तदुक्तं फलदं निःसृतं वनिष्ठं परम् | R.R.S 2/3

Abhraka mined from the Earth about 1 Rajahastha depth is considered to be having ideal qualities and those which are collected from above this level have less Satva and with impurities.

Mica

- Abhraka is called Mica in English. They belongs to sheet silicate minerals.
- In Latin the term Micare means ‘to Glitter’
- Micas are the group of silicates $(\text{SiO}_4)_3$ of Al, K, Hydroxyl Mg, Fe, Na, Li, F and traces of Rubidium, Sz, Cr, Mn, Be, Te etc
- All minerals of this group have perfect basal cleavage (splitting of crystals) are monoclinic (3 unequal crystallographic axes) or orthorhombic, with Pseudo - hexagonal crystals and are similar in chemical composition.
- Highly perfect cleavage is due to hexagonal sheet like arrangement of its atoms.
- They are fragile, smooth and lustrous. They are insoluble in water and are bad conductor of heat and electricity.

- Specific Gravity – 3, Hardness – 2.5-3.
- Contains 5-6% of moisture and 33-55% silicates in them.
- Used in eye shadows, foundations, highlighters, powders due to shimmering, glittering, pearly and opacity effect
- **Occurrence** - Mica is widely distributed and occurs in igneous, metamorphic and sedimentary rocks. Large reserves of Mica was found in Africa and South America. Largest single crystal of Mica (Phlogopite) was found in Ontario Canada (330tones) and Karelia, Russia.

Occurrence in India

- Hazaribhaag and Giridih Dist – Bihar
- Raniganj – Bhopal
- Nellore – Andhra Pradesh
- Selaun – Tamilnadu
- Ajmer – Rajasthan

Types of Abhraka

पीनाक नागमणं कूं वज्रमित् श्रकं मतम्
श्वेतादि वर्ण भेदेन प्रत के तच्च तुर्विधम् |R.R.S 2/4

There are 4 varieties of Abhraka are which are classified depending on their behavior with fire.

1. पीनाक
2. नाग
3. मण कूं
4. वज्र

Each variety is of 4 types according to the color, Shwetabhra, Raktabhra, Peetabhra and Krishnabhra.

अभ्रं सितारुणं मापीतवर्णं विभेदतः

चतुर्विधं समाख्यं संकृष्टं षण्त्रिंशद्वर्णं गदापहम् । R.T 10/3

Hence there are 16 types of Abhraka. Among these Krishnabhraka and Vajrabhraka or Krishna Vajrabhraka is considered as the ideal one.

Pinaaka	Naga	Manduka	Vajra
• Shweta • Rakta • Peeta • Krishna	• Shweta • Rakta • Peeta • Krishna	• Shweta • Rakta • Peeta • Krishna	• Shweta • Rakta • Peeta • Krishna

Types of Mica

S. No	Mica	Chemical Composition	Chemical Identification	Ayurvedic name
1	Biotite	$(\text{H,K})_2 (\text{Mg,Fe})_2 (\text{Al, Fe})_2 (\text{SiO}_4)_3$ Most common	Black Mica or Magnesium Iron Mica	Krishna Abhraka
2	Lepidolite	$\text{KLi} \{ \text{Al} (\text{OHF})_2 \} \text{Al} (\text{SiO}_4)_3$	Lithium or Ruby Mica	Rakta Abhraka
3	Muscovite	$\text{H}_2 \text{KAl}_3 (\text{SiO}_4)_3$	White or Potash Mica	Shweta Abhraka
4	Phlogopite	$\{ \text{HK} (\text{MgF}) \}_3 \text{Mg}_3 \text{Al} (\text{SiO}_4)_3$	Magnesium or Amber Mica	Peeta Abhraka
5	Paragonite	$\text{H}_2 \text{NaAl}_3 (\text{SiO}_4)_3$ Rarely seen	White or Sodium Mica	Sweta Abhraka

पीनाक

पीनाकं पावको तप्तं विमुञ्चति दलोच्च यम्
तत् क्षितं मलं बद्ध्वा रयत् वे मानवम् । R.R.S, 2/5

पीनाक Abhraka → separates into layers when heated on fire.

On consumption leads to severe constipation, death, and also may cause Maharogas like Kushta, Vatavyadhi, Asmari, Udararoga, Bhagandara, Arsha and Grahani roga.

नाग

नागाभ्रं नागवत् कुण्डं क्षिप्तं पावक संस्थितं
तद्भुक्तं कुरुते कुष्ठं मण्डलाख्यं संशयः । R.R.S, 2/6

- नागभ्र → produces appreciable hissing sounds like a snake when exposed to fire.
- नागभ्र if administered causes Mandala Kushta (skin diseases), Bhagandara, Mahakushta etc

मण कू

उत् सु सो सु यण कूं ढ सांपतति चाभ्रकम्
तत् कुदिश सीरोगमसाध यंस्त्र तो अन् था | R.R.S 2/7

मण कू Abhraka Jumps out of fire when exposed to fire.

If it administered it causes Ashmari roga which may be cured only with Surgery.

वज्राभ्र

वज्राभ्रं वह्निं तप्तं निर्मुक्ता शेष वैकृतम्
देहलोहकरं तच्च सर्वरोगहरं परम् | R.R.S 2/8

वज्राभ्र → neither exhibits any physical changes nor produces any sound when exposed to fire.

This is the best variety among the all and its judicious use will cure all the Maharogas – Kushta Vata vyadhi etc.

Its prolonged use make the body physically fit and radiant.

It fights aging and make the person look young.

It strengthens the body like 'Loha'.

❖ **These reactions are may be due to the presence 5-6% of water in it which separates, escapes or expels the pieces of Abhraka while heating.**

- ❖ **Shwetabhraka** - Brahmana - used in Shweta karma – to convert lower metals to silver and also used in Switra roga.
- ❖ **Peetabhraka** - Kshatriya – used in Peeta karma – to convert other Lohas into Gold and also used in Kaamala roga .
- ❖ **Raktabhraka** – Vaishya – used in Rakta Karma or Ranjana karma – and also used to increase Blood.
- ❖ **Krishnabhraka** – Shudra – considered as Shreshta – have Koti Koti guna.

ग्राह्य अभ्रक लक्षण

स्निग्धं धृथुदलं वर्णसंयुक्तं भारतोऽधिकम्
सुखनिर्मोचं यत्र च तदभ्रं शरः क्षीरितम् |R.R.S2/11

The best variety of Abhraka has following characteristics.

- Snigdha (unctuous),
- Pruthudala (broad layers),
- Varna Samyukta (black colored)
- Bharato Adhikam (Heavy)
- Sukha Nirmochya Patra (easily separable layers)

नीलांजनोपमं स्निग्धं भारपूर्णं महोज्ज्वलं बन्धुमर्मुचं
निर्मोचं यत्र मृदुलं तच्च श्रेष्ठमुच्यते | R.T 10/13

Abhraka which is

Black like Neelanjana (Bluish black)

Snigdha (unctuous),

Bharapurna (heavy),

Mahojjwala (bright /shiny),

Nirmochyapatra (with easily separable layers),

Mrudula (which is soft to touch) is the Ideal Abhraka
and is generally seen in Krishna Vajrabhraka.

Abhraka quality with respect to its availability

अभ्रकं हिमशैलोत् शुत्तमं परिकीर्तितम्
मध्मं पूर्वशैलोत् थं दक्षिणाद्रिजम् | R.T 10/14

Abhraka	→	Ores of Himalayan range has best therapeutic values.
Abhraka	→	From eastern India is medium
Abhraka	→	Southern India have low quality, unfit for therapeutic use.

अशुद्ध अभ्रक दोष

पीडां विधत्ते विविधां नराणां कुष्ठं क्षयं पाण्डुदं च शोफम्
हृत् पीडां च करोत् शुद्धमभ्रं हि तद्वत्पुरुषवह्निहृत् सा।
A.P 2/103

- ❖ Ashuddha Abhraka if consumed produces Kushta, Kshaya, Panduroga, Hrutparshva pida, Agnimandya and Ayu nasha i.e, death.
- ❖ Unpurified and improperly incinerated, Chandrayukta Abhraka bhasma is equal to Kalakoota Visha, which brings death immediately.

सत र्थासेवनार्थं च योजयेत्शोधिताभ्रकम्

अन्यथा त्वगुणं कृत् वन्निकारतये निश्चितम् | R.R.S 2/15

Always for extraction of Satva, and for administration, Shodhita Abhraka must be used otherwise it will produce innumerable diseases.

अभ्रक शोधन

प्रतप्तं सप्त वाराणि निक्षिप्तं कांक्षिके रभ्रकम्

निर्दोषं जायते नूनं प्रक्षिप्तं वाऽपि गोजले

त्रिफला क्वथिते चापि गवा दुग्धे विशेषतः | R.R.S 2/16-17

Thin sheets of Abhraka → held with Sandamsha Yantra → heated upto red hot → immersed in Kanji / Gomutra / Triphala kwatha / Godugdha → Nirvapa for 7 times each → Shuddha Abhraka.

- Each time fresh liquid should be taken.
- By this Nirvapa layers of Abhraka will get separated, Mud and sand particles will be dissociated into the liquids.
- Rasa Tarangini mentioned Badari Kwatha for Nirvapa.

धान आ

चूर्णाभ्रं शालिसंयुक्तं वस्त्र बद्धं हि कांश्चिके
निर्यातं मर्दनाद्वस्त्राद् धान आमिति कथं से | R.R.S.

पादांशं शालिसंयुक्तं अभ्रकं कम बादरे
त्रिरात्रं स्थापयेन्नीरे तत् क्लिन्नं मर्दयेत् दृढम्
कम बादूलितं स क्षणं वालुका रहितं च यत्
तद्धान आमिति प्रोक्त मभ्रमारण सिद्धये | R. Sa. Sar

- Shuddha Abhraka – 1 part
- Shaali with Husk – 1/4 part

Abhraka and 1/4th part Shaali → tied like a Pottali in a jute cloth or piece of rug with a strong thread → soaked in Kanji or water for 3 nights → Pottali is vigorously rubbed with hands in the same liquid → Squeezed → Abhraka gradually trickles out through the pores of the jute cloth collected at the base of the Vessel → water is decanted. Sh Abhraka collected → washed with warm water, dried and used for the further processing.

- Friction between pointed ends of Shaali and Abhraka breaks the Abhraka into powder form.
- Here impurities like stone wood pieces and sand particles remain inside the Pottali and only Abhraka will be filtered out.

अभ्रक मारण

पुट संख या

विंशत् ऋः शतान् स तुटौ रोगनिवृत्तये

शतादिसु तुहस्रान् तप्रशसु स यसायने | R.T 10/29

Abhraka bhasma prepared with 20-100 Putas – for Roga nivaranartha

100 - 1000 Putas – Rasayanartha and Vajeeekaranaartha

1st method

धान् आंका समर्दसु यसेन परिमर्दितम्

पुटितं दशवारेण म्रियते नात्र संशयः | R.R.S 2/22

Dhanyabhraka taken in Khalva yantra trituration with Kasamarda Swarasa or Kwatha (Cassia occidentalis) → Chakrikas dried kept in Sharava Samputa subjected to 1 Gajaputa Bhavana with Kasamarda Swarasa → Gaja Puta repeated for 10 times.

2nd Method

तद्वत् सु ससेनापि तन् ब्रूयिष्यसेन च | R.R.S 2/22

Dhanyabhraka → Triturated with Mustha kwatha (Cyperus rotundus) or Tanduliya Swarasa (Achyranthus aspera) → Chakrikas → dried → Sharava Samputa → Gajaputa → 10 times → brick red Abhraka Bhasma.

3rd Method

गन् ध्वं पत्र तोयेन गुडेन सह भावितम्

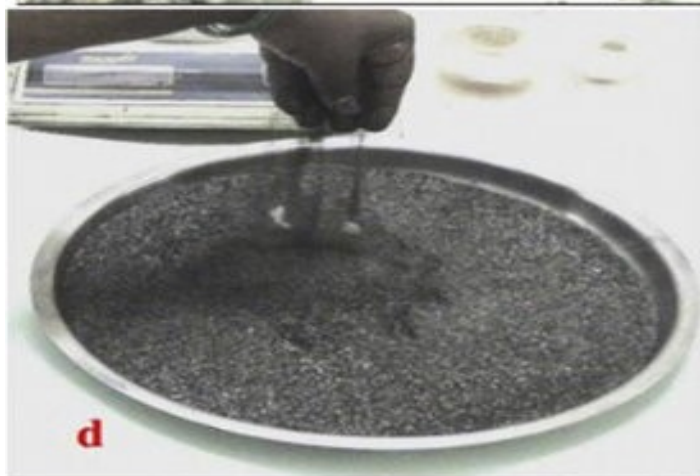

ऊर्ध्वाऽधौ वटपत्राणि निश्चन् ब्रत्रिपुटैः ख गम् | R.R.S 2/26

➤ Dhanyabharaka along with equal quantities of Guda taken in a Khalva yantra and given Bhavana with Eranda patra swarasa.

➤ Later Chakrikas were prepared dried under Sun, kept in Sharava Samputa in between 2 Vatapatras and Subjected to 3 Gajaputa. This will yield a luster free Abharaka bhasma

Mica toxicity – Vomiting, Nausea, Abdominal discomfort, symptoms of heavy metal deposition in Kidney and Liver. Mica inhalation leads to Pnuemoconiosis and silicosis (Breathlessness, cough, mica lung etc)

अभ्रक भर मलक्षण

निश्चन्द्र चारुणं र च च्छुसूक्ष्मं र्श कोमलम्

अभ्रं मृतं विजानीयाद् रसतन् त्रिविचक्षणः | R.T.10/55

Abhraka bhasma should be Nischandra (lustrefree), Aruna (Reddish in color), Swaccha (dirtfree/ clean), Sookshma (very fine), and Komala (soft to touch), apart from other Bhasma lakshanas like, Varitara, Unnama, Rekhapoorna, Niswadu, Sookshma etc.

1st Method

मृताभ्रसंमितं गव्यमाज यदंत आकं पचेत्
अमृतीकृतमेव त्वनं कार्येषु योजयेत् | R.T 10/71

Abhraka Bhasma – 1part

Goghrita – 2 parts

Both above drugs are heated in an Iron vessel under mild fire, with frequent stirring until all liquid content is evaporated.

2nd Method

कन माषुघगव्याज यं लादिक तपनांशकम्
पचेन्म दालेनैतदमृतीकरणवरम् | R.T.10/70

Abhraka bhasma – 12parts

Kumari swarasa -16parts

Goghrita – 12 parts

All the above ingredient are mixed, taken in an Iron vessel and cooked until all the liquid parts get evaporated.

अरुणभस्म मरु तुनरमृतीकरणेन गुणवृद्धिर्वर्णहानिश्च भवति |A.P2/135

It is indicated for Loha and Tamra and minerals containing them.

It increases Ushna, Teekshna, Rukshata of Bhasma but there will be losing of bright red color of the Abhraka Bhasma.

Lohiteekarana

Even though the remnant Doshas are removed by Amruteekarana process, the original color of the Bhasma will be lost and become Black. To regain the original color Lohiteekarana is done.

गाङ्गेकी भद्रमुसु तप्तक्षीरं सैव च
वटमूलजलं वापि हरिद्राया द्रवसु स्यात् ।
समङ्गं क्वाथितञ्चैव घनमेभिः सुपेषयेत्
पुटद्वयं त्रयं वापि वितरेद्विषजां वरः ।
निश्चन्द्रिकञ्च मृदुलं रक्तो तस्यैव समप्रभम्
गगनसु यमवेद्भूतमततः कार्येषु योजयेत् । R.T 10/65-67

Amruteekrita Abhraka bhasma is subjected to Bhavana with Swarasa of or Kwatha of Gangeruki (Naagabalaa), Musta, Vataksheera, Vatamula, Haridra, Samangaa (Manjista) or Lajjalu, followed by 2 or 3 Puta is given, to obtain Nischandra Arunavarnayukata (red colored) Abhraka bhasma.

अपक्व अभ्रक भर म्लोष

सेवितं च न द्रुसंयुक्तं मेहं मन दालं चरेत् | R.R.S 2/13

सच न द्रविषवज्ज्ञेयं मृत कुत् व्याघ्ररोमवत् | A.P.2/105

Improperly prepared Abhraka Bhasma if consumed produces Prameha, Mandagni, Chidrodera and kills the individual like a poison, diamond, weapon, fire or hair of a Tiger.

Antidote - For the consumption of Ashuddha Abhraka or Apakwa Abhraka Bhasma one should administer Atasi beeja (Linum usitatissimum) pasted with water for 3 days.

Rasadi Gunas

Rasa – Madhura, Kashaya

Guna – Snigdha

Veerya – Sheeta

Vipaaka – Madhura

Prabhava – Rasayana, Yogavahi, Vrishya and Balya

Matra (Dosage) – 1-2 Ratti twice or thrice daily

Anupana – Madhu, Ghrita, Navaneeta, Dugdha or any other adjuvant suitable to the disease condition.

Properties and Uses

गौरीतेजः परमममृतं वातपित्तक्षयघ्नम्
प्रज्ञाबोधि प्रशमितरुजं वृष मायुष मरु म्
बल यस्त्रिंशं चिदमकफं दीपनं शीतवीर्यम्
तत्तद्वै सकलगदहृत् व्योम सूतेन ब्रन्धिः | R.R.S 2\2

It is like a nectar, Vatapittahara, Kshayahara, Smrutivardhaka, Vrushya, Ayushya, Balya, Ruchikara, Kaphahara, Agnideepaka, Sakalarogahara and also one of the most important drug used in Parada Bandha

It is Keshya, Varnya, Netrya, Medhya, Stanyavardhaka and protects the individual from all the Maharogas.

- Aushadha sevana kala – 2 times/day
- Kala maryada - 7 days to 40 days

Therapeutic Uses / Avasthanusara uses

वल लोष समन्वितं घृतयुतं वल क्षितं सेवितम्
दिव्याभ्रं क्षयपान् कुग्रहणिका शूलामकुष्ठामयाम्
जूतिं श्वासगदं प्रमेहमरुचि का सामयं दुर्धरम्
मन् क्षिं जठरव्यथां विजयते योगैरशेषामयान् | R.R.S 1/50-51

Abhraka Bhasma – 1 Valla (5mg), Vidanga and Trikatu churna – 1 Valla each administered along with Ghrita, cures Kshaya, Pandu, Ruk, Grahani, Shoola, Ama, Kushta, Jwara, Swaasa, Prameha, Aruchi, Asadhya Kaasa, Mandagni, Jatararoga etc

आ मयिक प्रयोग

1. Jwara – Abhraka bhasma with Rasasindura.
2. Jeernajwara – Abhraka bhasma, Pippali churna and Madhu
3. Drushti vardhaka – Abhraka bhasma given with Triphala churna and Madhu.
4. Grahani – along with Trikatu and Madhu
5. Raktapitta – it is administered with Haritaki, Guda, Khanda and Ela churna or with Vasa swarasa
6. Arsha, Pandu, kshaya, haleemaka – it is given with Trikatu, Triphala, Chaturjata and madhu.
7. Prameha – Abhraka bhasma is given with Haridra churna, Pippali churna and Madhu. Guduchi satva with Abhraka bhasma can also be given.

8. Kshaya roga – Abhraka bhasma is given with Svarna bhasma and suitable Anupana for a month.
9. Shukrotpatti and for Santanartha (infertility) – it is given with Rajata bhasma and Svarna bhasma.
10. Arshas – Abhraka bhasma is administered with Sh Bhallataka or any of the Bhallataka yoga.
11. In Kaphaja and Krimi ja Hridroga, Abhraka bhasma is given with Kajjali and Arjuna kwatha .
12. In Vataroga it is given with Shunti, Pushkaramula, Bharangi and Vamshalochana along with Honey, in Pittaroga, Abhraka bhasma is given with Chaturjataka churna and Sugar or with milk and Sugar and in Kapharoga it is given with Pippali churna, Katphala churna and Honey.

अभ्रक सत घातन

पादांश टङ्कोपेतां मुसलीरस मर्दितम्
रुन् द्वा षष्ठ्यां दृढं ऽ सांसत् कृपं भवेद् घनम्
R.R.S 2/26

- अभ्रक – 1part
- टङ्क – ¼ Part
- मुसलीरस – Q.S

1 part of Shuddha Abhraka mixed with 1/4th part of Shuddha Tankana and triturated thoroughly with Musali Swarasa to prepare Chakrikas, then dried under Sun and taken in Musha, is subjected to intense heat in Satvapatana Koshti, Till Shuddhavarta laxana is seen.

By doing so white colored Satva (Fe, Al, Mg, Mn etc) will be obtained.

- **Abhraka Satva Shodhana** - Abhraka Satva is heated red hot and dipped 7 times in Triphala kwatha or Vata mula Kwatha or Amladravya or Kanchi, by taking fresh liquid each time.
- **Abhraka Satva Marana** – 1 part of Shuddhha Abhraka Satva, $\frac{1}{2}$ Part of Sama Gandhaka Kajjali are taken in clean Khalvayantra and triturated. The mixture is taken in a Kacha kupi, placed in Valuka yantra and heated intensely to get Abhraka Satva Bhasma.

Abhraka Satva properties and Uses

अभ्रसत् वसुशिशिरं मधुरं रुचिरं परम्
सुस्निग्धं केशं मायुशं त्रिदोषघ्नं रसायनम् | R.T.10/112

Abhraka Satva Bhasma possesses Sheeta Veerya, Madhura Rasa, it is Snigdha, Ruchikara, Keshya, Ayushya, Tridosahara and have Rasayana properties.

Abhraka sevana kale Apathya –

करीरं कारवेलं कर्कटिको लमम् कम्
तैलं क्षारञ्च वृन् क्वा नाश्नीयाद् अभ्रसेवकः | R.T.10/116

During administration of Abhraka one should avoid intake of Kareera, Karavellaka, Karkati, Amla dravyas , Badaraphala, Vrintaka, Taila and Kshara yukta Ahara.

Kareera

Karavellaka

Karkati

Kola

Vrintaka

Important Yogas \ Formulations

1. Arogya Vardhini Vati
2. Gagana Parpati
3. Panchamruta Parpati
4. Bruhat Vata Chintamani Rasa
5. Vasanta Kusumakara Rasa
6. Kasturi Bhairava Rasa
7. Prabhakara Vati
8. Yogendra Rasa
9. Swasa Kasa Chintamani Rasa
10. Vijaya Parpati etc

Abhraka Bhasma chemical composition :

- Silicon dioxide(SiO_2), Aluminium oxide (Al_2O_3), ferric oxide (Fe_2O_3), Magnesium oxide (MgO), Potassium oxide (K_2O), Calcium oxide (CaO), Titanium oxide (TiO_2) etc

Pharmacological actions

- **Rasayana** – Abhraka Bhasma is a potent rejuvenating substance enhances vitality and promotes longevity.
